7	Rules	
8	FED. R. EVID. 702.....	8, 17

1 Plaintiffs cannot survive summary judgment without producing evidence of
2 actual damages incurred by themselves and their classes. To help shoulder that
3 burden for their Customer Service Class, they rely on the opinions of Jay Minnucci,
4 an independent consultant in the call center industry. *See* ECF 494 at 97. Minnucci
5 is not designated as a damages expert, nor is he qualified to serve as one, so his report
6 does not calculate damages outright. Instead, Minnucci proposes and generates inputs
7 for Plaintiffs' Customer Service Class damages calculation.

8 Specifically, Minnucci claims that a third-party survey of unspecified call
9 centers in different industries spanning periods before the COVID-19 pandemic and
10 after the class period should serve as the "industry standard" and performance
11 benchmark for Bank of America (BANA)'s Claims Call Center. He does so even
12 though BANA's call center indisputably experienced a [REDACTED]
13 [REDACTED],
14 while the call demand *decreased* or remained flat for many survey participants.

15 Minnucci further opines that BANA's Claims Call Center's performance, and
16 the Customer Service Class's purported damages, should be measured based on that
17 metric and the average call wait times for the Claims Call Center even though (1)
18 Minnucci has never seen the underlying data for the survey, (2) Minnucci does not
19 know how those call centers and the circumstances they faced compared to BANA's,
20 (3) the wait times varied among class members, and (4) [REDACTED]
21 [REDACTED]. Having no knowledge of the data underlying
22 the survey or its averages, Minnucci is in no position to opine that they reflect
23 industry standards or appropriate benchmarks, much less damages for the class. Thus,
24 his opinions, and any damages calculations relying on them, must be excluded as
25 unreliable and irrelevant.

26 To the extent Minnucci purports to calculate BANA's purported cost savings,
27 those opinions also must be excluded because they improperly rely on the survey as
28 the "industry average and benchmark" and [REDACTED]

1 [REDACTED] rendering it unreliable and inflated. The
2 opinions also must be excluded because they rely on undisclosed, decades-old data,
3 that Minnucci did not verify, from a handful of clients in other industries, and because
4 they apply a formula (Erlang-C) for which the underlying assumptions are
5 inapplicable here.

6 To the extent Minnucci opines that [REDACTED]
7 [REDACTED]
8 [REDACTED]
9 [REDACTED] his opinion and assumptions should be excluded
10 because they are refuted by the record and his own testimony. Further, they should
11 be excluded because his suggestion that [REDACTED]
12 [REDACTED] is at odds with his own experience and forecasting activities of
13 his clients. Finally, to the extent Minnucci seeks to opine on BANA's intent, those
14 opinions are improper and must be excluded under well-established law.

15 BACKGROUND

16 **I. BANA's Claims Call Center**

17 During the COVID-19 pandemic, BANA call centers performed three
18 functions: [REDACTED]

19 [REDACTED]
20 [REDACTED]
21 [REDACTED]
22 [REDACTED] HX¹ 10 at 14. [REDACTED]
23 [REDACTED] HX 11A.

24 By contrast, [REDACTED]
25 [REDACTED]. *Id.* [REDACTED]
26 [REDACTED]
27 [REDACTED] *See id.* [REDACTED]

28 ¹ Exhibits to the Declaration of Lindsay E. Hoyle shall be referred to as "HX."

1 [REDACTED]
2 [REDACTED]. *Id.* These
3 efforts were complicated as call center agents transitioned to work-from-home,
4 [REDACTED]
5 [REDACTED]. HX 12 . Further
6 complicating matters, many state and local governments shut down, [REDACTED]
7 [REDACTED] HX 13 at 273:7–19. [REDACTED]
8 [REDACTED]
9 [REDACTED] See HX 14 .

10 II. Plaintiffs’ Customer Service Claims

11 Plaintiffs assert that they received UI benefits from EDD via prepaid cards
12 issued by BANA, and that they experienced unauthorized transactions on their cards.
13 ECF 406 (TAMCC) at 2; ECF 324-1 at 1. Plaintiffs allege, among other things and
14 with the benefit of hindsight, that BANA failed to provide “reasonable and adequate
15 customer service” to certain callers by deliberately understaffing the Claims Call
16 Center to achieve cost savings and “forcing” callers “to wait for hours on hold”
17 causing “significant foreseeable harm.” See TAMCC ¶ 582(d)(i)(E). They further
18 allege that BANA could “forecast customer service call volume and adequately staff
19 its call centers” yet did not do so. *Id.* They allege on behalf of the Customer Service
20 Class that these actions were negligent and breached an implied covenant of good
21 faith and fair dealing. TAMCC ¶¶ 585–593; 619–624. Both causes of action, among
22 other things, require Plaintiffs to prove damages resulting from the purported
23 misconduct.²

24 III. Minnucci’s Inadmissible Damages Inputs and Opinions

25 In support of their Customer Service claims, Plaintiffs proffer Minnucci as an
26

27 ² See *Sabicer v. Ford Motor Co.*, 362 F. Supp. 3d 837, 840 (C.D. Cal. 2019)
28 (negligence claim requires damages); *Rosenfeld v. JPMorgan Chase Bank, N.A.*, 732
F. Supp. 2d 952, 968 (N.D. Cal. 2010) (good faith and fair dealing requires showing
that “plaintiff was harmed by the defendant's conduct”).

1 expert in the call center industry where he has been a consultant since 2000. HX 11
2 ¶ 8. Plaintiffs rely on Minnucci to provide the inputs for their damages calculations.
3 Specifically, they rely on his opinions that (1) virtually all EDD prepaid cardholders
4 who had their calls routed to the Claims Call Center during the class period waited
5 [REDACTED]
6 [REDACTED] (*id.* ¶ 107); (2) “[t]he total number of excess
7 hours” that class members waited to speak to a Claims Call Center agent can be
8 calculated by multiplying [REDACTED] by the number of calls class members made
9 to the Claims Call Center during the class period (*id.*); and (3) understaffing the
10 Claims Call Center allowed BANA to avoid [REDACTED]
11 [REDACTED] which it would have had to incur if it
12 had provided “industry standard” service (*id.*, Tables 10, 11; *see id.* ¶ 17).

13 For his **“industry standard” opinion**, Minnucci relies entirely on two data
14 points as the building blocks for Plaintiffs’ damages inputs: a 75-second average
15 speed to answer (“ASA”) and a 6.1% abandonment rate. *Id.* ¶¶ 12, 14. He sources
16 these figures from the 2021 iteration of an annual publication by ContactBabel
17 designed to “study[] the performance, operations, technology and HR aspects of US
18 contact center operations” using survey responses from certain call centers. HX 15 at
19 13. Minnucci opines that the survey averages are “industry-standard performance
20 benchmarks” for “all call centers, including specialty call centers like” the Claims
21 Call Center. HX 11 ¶ 42; *see id.* ¶¶ 40, 49. Minnucci offers this opinion despite the
22 fact that: (1) he did not review the data on which the averages are based (HX 16 at
23 220:16–19); (2) he does not know who the survey respondents are, what type of call
24 centers or services they offered, or whether their data included multiple or aggregated
25 call centers (*id.* at 205:3–15, 205:23–206:4, 220:16–19, 221:3–18); (3) he does not
26 know whether any respondent experienced call volumes spikes or fraud attacks
27 similar to BANA’s (*see id.* at 220:11–18, 222:14–223:1); and (4) he does not even
28 know what specific timeframe the respondents used to compile their data (*id.* at

1 222:2-11).

2 For his **“excess hours” opinion**, Minnucci takes the purported “industry
3 average” ASA from the ContactBabel survey and subtracts it from the ASA for all
4 individuals who called the Claims Call Center during the class period. HX 11 ¶ 107.
5 He does so even though he admits that the [REDACTED]
6 [REDACTED] HX 16 at 398:1-18. Further, he agrees that
7 some class members would have experienced shorter wait times depending on when
8 they called. *Id.* at 139:22-140:2. And he admits that he does not know if or the extent
9 to which the experience of an individual, or the class as a whole, differed from the
10 aggregate average. *Id.* at 135:8-136:4. Plaintiffs then take Minnucci’s excess hours
11 opinion and propose that they would multiply it by (1) the number of calls made by
12 Customer Service Class members and (2) the minimum wage even though each caller
13 was collecting UI benefits (and therefore claiming to be unemployed and not earning
14 wages at the time). *See* ECF 324-1 at 39–40.

15 For his **“avoided workload” opinion**, Minnucci claims he can estimate the
16 total workload avoided costs from BANA’s alleged understaffing by estimating the
17 number of agents and related costs that would have been needed to achieve the
18 ContactBabel “industry standard” 75-second ASA and 6.1% abandonment rate. HX
19 11 ¶¶ 109-111. To do so, he first attempts to estimate the amount of distinct caller
20 demand in the Claims Call Center using unproduced data from “probably about eight
21 clients.” HX 16 at 408:16-17; *see* HX 11 ¶ 110 & Table 9. Minnucci claims these
22 clients included members of the property and casualty industry, health insurance
23 clients, utilities, and a membership organization, and says that the data was collected
24 over a six-to-eight year period *beginning in 2005*. *See* HX 16 at 411:21-413:1.
25 Minnucci uses his clients’ data to develop a regression formula that purports to
26 calculate an expected recall percentage for abandoned calls based on call
27 abandonment percentages. *See* HX 11 ¶ 110, Table 9 & App’x H. He then applies
28 that formula to BANA’s [REDACTED] which includes [REDACTED]

1 [REDACTED] to estimate the number of
2 callers to the Claims Call Center who abandoned their calls and did not call back in
3 an effort to remove duplicates who may have called and abandoned their calls
4 multiple times. *See* HX 11 Table 9 & App’x H. Next he adds this estimate to the
5 number of answered calls to compute the total distinct caller demand. *Id.* Table 9.

6 Finally, to estimate workload charges avoided, he multiplies his distinct caller
7 demand calculations by 93.9% (based on the ContactBabel 6.1% abandonment rate),
8 and then multiplies that figure by BANA’s average call length to calculate the
9 number of paid workload hours required to achieve a purported industry standard
10 rate. *Id.* Table 10. From this figure he [REDACTED]

11 [REDACTED]
12 [REDACTED] *Id.* Minnucci admits this
13 calculation, which relies on [REDACTED], does not
14 reflect workload charges solely attributable to the class. *See* HX 16 at 449:11–21.

15 For his **“avoided idle charge” opinion**, Minnucci claims he can estimate
16 avoided costs associated with times between calls when call center agents are waiting
17 to service new customers. To do so, Minnucci apportions his distinct caller demand
18 figures across 30-minute intervals using call distribution percentages experienced by
19 some of his consulting clients that he describes as having a “majority West Coast
20 calling base.” *See* HX 11 App’x I.³ He next uses a formula, Erlang-C, to generate a
21 retroactive estimate of the staffing requirements for the Claims Call Center during
22 each interval necessary for BANA to achieve the ContactBabel 75-second ASA. *Id.*
23 ¶ 113 & Table 11. He does so even though he admits that Erlang-C is not typically
24 used in this fashion as it is typically used for forecasting (not *ex post* modeling), and
25 even though its key assumptions were not actually present at the Claims Call Center
26 during the class period. *See* HX 16 at 438:1-9.

27 _____
28 ³ Minnucci’s Report does not provide any other information about his clients, or
indicate when this data was collected or compiled, or whether it reflects call
percentages during the class period.

1 Minnucci then subtracts the number of minutes he claims would need to be
2 staffed from the number of minutes he claims agents would have spent answering
3 calls and divides the result by 60 to compute idle hours. HX 11 ¶ 113, App'x I &
4 Table 11. He then [REDACTED]
5 [REDACTED]. *Id.* Table 11.
6 Like his workload charges calculation, this calculation uses [REDACTED]
7 [REDACTED] and therefore does not reflect avoided costs solely attributable to
8 class members. HX 16 at 449:23–450:7.

9 **IV. Minnucci's Other Inadmissible Opinions**

10 Minnucci opines that [REDACTED]
11 [REDACTED]
12 [REDACTED]. HX 11 ¶¶ 63–65. In
13 support, he points to [REDACTED]
14 [REDACTED]
15 [REDACTED]
16 [REDACTED]
17 [REDACTED] *Id.* ¶ 64. Minnucci further surmises, in hindsight, that because [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]
21 [REDACTED] *Id.* ¶ 65. Minnucci makes these claims despite the fact that his
22 own analysis showed a [REDACTED]
23 [REDACTED]. HX 16 at 288:12–20. He further concedes
24 that he cannot recall ever forecasting call volumes in this way. *Id.* at 291:21–292:14.
25 Nor has he ever attempted to [REDACTED]
26 [REDACTED]
27 [REDACTED]
28 [REDACTED] *See id.* at 292:5–14; HX 11 ¶ 61.

1 Finally, based on his selective review of the record, Minnucci opines that
2 [REDACTED]
3 [REDACTED] HX 11 ¶ 81; *see*
4 *also id.* ¶¶ 15, 51, 58–61, 63, 66, 69–70, 74, 78, 82, 101. To do so, Minnucci relies
5 on [REDACTED]
6 [REDACTED] *See* HX 17 at 14:20–16:19,
7 20:25–21:6. He concedes that he did not review her testimony or the testimony of the
8 individual who allegedly understaffed the call center prior to issuing his report. *See*
9 HX 16 at 145:9–146:3, 357:17–358:18.

10 STANDARD OF LAW

11 Federal Rule of Evidence 702 and *Daubert v. Merrell Dow Pharms., Inc.*, 509
12 U.S. 579 (1993), “impose[] a special ‘gatekeeping obligation’ on trial judges”
13 presented with expert testimony. *Brighton Collectibles, Inc. v. RK Tex. Leather Mfg.*,
14 923 F. Supp. 2d 1245, 1253 (S.D. Cal. 2013) (Curiel, J.). Under Rule 702, a witness
15 proffered as an expert must satisfy the following requirements:

16 (a) the expert’s scientific, technical, or other specialized knowledge will help
17 the trier of fact to understand the evidence or to determine a fact in issue; (b)
18 the testimony is based on sufficient facts or data; (c) the testimony is the
product of reliable principles and methods; and (d) the expert has reliably
applied the principles and methods to the facts of the case.

19 Under *Daubert*, district courts must “carefully apply[] Federal Rule of Evidence 702
20 to ensure that specialized and technical evidence is ‘not only relevant, but reliable.’”
21 *Brighton Collectibles*, 923 F. Supp. 2d at 1253. The reliability standard tests:

22 (1) whether the scientific theory or technique can (and has been) be tested; (2)
23 whether the theory or technique has been subjected to peer review and
24 publication; (3) whether there is a known or potential error rate; and (4)
whether the theory or technique is generally accepted in the relevant scientific
community.

25 *Domingo v. T.K.*, 289 F.3d 600, 605 (9th Cir. 2002). In addition, “[o]ne very
26 significant fact to be considered is whether the experts are proposing to testify about
27 matters growing naturally and directly out of research they have conducted
28 independent of the litigation, or whether they have developed their opinions

1 expressly for purposes of testifying.” *Daubert v. Merrell Dow Pharms, Inc. (Daubert*
2 *II)*, 43 F.3d 1311, 1317 (9th Cir. 1995).

3 “[T]he burden of proving the expert’s testimony satisfies Rule 702” and the
4 *Daubert* standard rests on the Plaintiffs, as “[t]he proponent of the evidence.”
5 *Brighton Collectibles*, 923 F. Supp. 2d at 1253.

6 ARGUMENT

7 None of the opinions discussed above passes muster under Fed. R. Evid. 702
8 or *Daubert*. As set forth below, Minnucci has no basis to opine that the ContactBabel
9 survey provides appropriate industry averages or performance benchmarks for the
10 Claims Call Center during the class period, making his opinions—and the Customer
11 Service damages and cost savings models that rely on ContactBabel to assess
12 purported harm and cost savings—unreliable. Minnucci’s opinions and Plaintiffs’
13 calculations of Customer Service Class “harm” and “cost savings” are also unreliable
14 and irrelevant because they rely on [REDACTED]

15 [REDACTED]. Thus, they cannot serve
16 as a reliable measure of any purported harm or cost savings for the Customer Service
17 Class or any individual class member. Minnucci’s purported “cost savings” measures
18 are further unreliable and irrelevant because they rely on (1) cherry-picked data (that
19 he did not check for accuracy) from eight unidentified clients from decades before
20 the class period, and (2) a formula whose assumptions were not met during the class
21 period and that is not used in the industry to assess staffing or measure damages *ex*
22 *post*. For each and all of these reasons, Minnucci’s damages inputs and any related
23 opinions must be excluded and cannot serve as evidence in support of Plaintiffs’
24 Customer Service Class damages claims.

25 As for Minnucci’s opinion that BANA could and should have used the [REDACTED]
26 [REDACTED] the opinion is unreliable and
27 irrelevant because it is contradicted by the record, his own forecasting experience,
28 and the practice of his consulting clients. And to the extent Minnucci repeatedly

1 attempts to offer an opinion as to BANA's intent or state of mind, those opinions
2 must be excluded because they are not proper bases for expert opinion.

3 **I. Minnucci's Damages Inputs and Calculations Must Be Excluded.**

4 **A. Minnucci's industry standard opinion should be excluded.**

5 Minnucci opines that [REDACTED]
6 [REDACTED]
7 [REDACTED]

8 [REDACTED] HX 11 ¶¶ 12, 107. Further, he opines that the average industry abandonment
9 rate was 6.1%. *Id.* ¶¶ 14, 40. He derives both averages from a 2021 report issued by
10 ContactBabel, which surveyed call centers from various industries providing various
11 services and levels of customer support over periods that include time before the
12 pandemic and after the class period ended in November 21, 2020. *Id.* ¶ 12 n.1; HX
13 16 at 208:7–14. Plaintiffs then use Minnucci's opinion, and the survey specifically,
14 to calculate damages for the Customer Service Class by subtracting the "industry
15 average" from the aggregate average wait for callers to the Claims Call Center during
16 the class period, and multiplying it by the minimum wage in California. *See* ECF
17 324-1 at 39–40.⁴ Minnucci's opinion, and any damages calculations based on them,
18 must be excluded for at least three reasons.

19 First, Minnucci's opinions must be excluded because they are conclusory,
20 speculative, and not based on any analysis of the data from which ContactBabel's
21 averages were derived. An "expert's opinion must rest on 'facts or data in the case
22 that the expert has been made aware of or personally observed,' not merely
23 assumptions and speculation." *Stephens v. Union Pac. R.R. Co.*, 935 F.3d 852, 856
24 (9th Cir. 2019) (quoting Fed. R. Evid. 703); *see also McCoy v. DePuy Orthopaedics,*
25 *Inc.*, 2024 WL 1705952, *11 (S.D. Cal. Apr. 19, 2024) (excluding expert opinion
26 where expert "simply parrot[ed] the opinions of other experts . . . without conducting
27

28 ⁴ As discussed above and further below, Minnucci also improperly relies on the
ContactBabel abandonment average to estimate avoided costs. *Supra* at 5-6; *infra* 16.

1 an independent investigation of the underlying evidence.”) (internal quotations
2 omitted). Yet Minnucci concedes he did not review *any* of the data on which these
3 numbers are based. *See* HX 16 at 220:16–19. Nor does he know “how each individual
4 call center responded” to ContactBabel’s questionnaire, or who the respondents are
5 or “what . . . makes up their call center[s] and what different divisions and
6 departments they may have.” *Id.* at 206:1–4, 220:16–19, 221:3–9. Nor does he know
7 whether any respondent experienced a dramatic increase in call volumes in 2020
8 similar to that experienced by the Claims Call Center (*see id.* at 220:11–19), which
9 was experiencing a [REDACTED]
10 [REDACTED] *See* HX 11A. Nor does he know how many survey respondents were
11 a [REDACTED], or whether any survey
12 respondents provided general customer service or more complex services such as
13 fraud claims processing. HX 16 at 220:21–221:18. Nor does he know whether any
14 respondent experienced a [REDACTED] (*id.* at
15 222:14–223:1), as the Claims Call Center did. *See* HX 18 ¶ 46; HX 19 at 60:23–61:9;
16 HX 20 at -6783–84. And most basically, Minnucci does not even know *what*
17 *timeframe* the respondents used to compile their data, or whether respondents with
18 more than one call center provided aggregate data to ContactBabel. HX 16 at 222:2–
19 11.

20 These admissions, and others, confirm that Minnucci has no basis to assert that
21 the ContactBabel numbers are even accurate, much less that they constitute an
22 appropriate “industry average” or performance benchmark for a call center facing
23 similar facts and circumstances as BANA’s Claims Call Center during the class
24 period. Thus, they must be excluded. *See, e.g., McCoy*, 2024 WL 1705952, *11
25 (excluding expert opinion where expert conducted no “independent investigation of
26 the underlying evidence”) (internal quotations omitted).⁵

27 ⁵ *See also Griffio v. Oculus VR, Inc.*, 2018 WL 6265067, *6 (C.D. Cal. Sept. 18, 2018)
28 (expert report failing to provide “facts underlying [a particular] calculation”
inadmissible as “[t]he conclusions do not ‘rest[] on a reliable foundation.’”) (quoting

1 Second, Minnucci’s “industry average” and performance benchmark opinions
2 also should be excluded because he concedes that neither he, nor any other industry
3 participant, uses or relies on aggregate data across various industries or call center
4 functions to set performance targets. Minnucci cites no source to show that other call
5 center industry professionals use the ContactBabel survey averages as performance
6 benchmarks. And at his deposition, Minnucci conceded that he does not even use
7 them as such in his own consulting business. *See* HX 16 at 202:3–5. Rather, Minnucci
8 testified that he relies on multi-industry averages to answer client questions about
9 how a call center’s *existing* performance targets “compare to what others are doing,”
10 not to set the targets in the first instance. *See id.* at 210:2–22. Thus, Minnucci has no
11 basis to rely on the ContactBabel averages to set performance standards for BANA
12 because that is not consistent with the industry’s use or “the practice of an expert in
13 the relevant field.” *Kumho Tire Co. v. Carmichael*, 526 U.S. 137, 152 (1999); *see*
14 *also In re Incretin-Based Therapies Prods. Liab. Litig.*, 524 F. Supp. 3d, 1001, 1044
15 (9th Cir. 2022) (excluding opinion due to “discrepancy between what [expert]
16 endorses in this litigation and in the scientific community”).

17 Third, Minnucci’s “industry average” and performance benchmarks should be
18 excluded because what little Minnucci does know about the ContactBabel survey
19 confirms that the respondents are not apt comparators for BANA’s Claims Call
20 Center during the class period. *See, e.g., Goodness Films, LLC v. TV One, LLC*, 2014
21 WL 12780291, *2–3 (C.D. Cal. May 19, 2014) (excluding damages opinion based
22 on comparisons where experts failed to show comparators were sufficiently similar
23 to be relevant); *Multimedia Pat. Tr. v. Apple Inc.*, 2012 WL 5873711, *9 (S.D. Cal.
24 Nov. 20, 2012) (excluding opinion based on “generic industry data [that] is not
25 tethered to the relevant facts and circumstances of the present case”); *Faust v.*
26
27 *Daubert*, 509 U.S. at 597); *Rodman v. Otsuka Am. Pharm., Inc.*, 564 F. Supp. 3d 879,
28 889–91 (N.D. Cal. 2020) (excluding opinion where expert “exceed[ed] the
boundaries of the sources she relie[d] on by going beyond what the sources
concluded”), *aff’d* 2021 WL 5850914 (9th Cir. Dec. 9, 2021).

1 *Comcast Cable Commc'ns Mgmt., LLC*, 2014 WL 3534008, *5 (D. Md. July 15,
2 2014) (refusing to allow extrapolation of conclusions concerning employees working
3 in one set of call centers to employees working in a different call center).

4 Most basically, the ContactBabel survey includes periods of time outside the
5 narrow class period (September 13, 2020 through November 21, 2020), including
6 data from January and February 2020 (before the pandemic impacted U.S. call
7 centers). *See* HX 16 at 208:7-14; HX 15 at 13. Minnucci does not explain how pre-
8 pandemic data could be relevant or serve as an appropriate yardstick against which
9 to measure BANA's performance during the class period (which was at the height of
10 the pandemic). Nor could he, as it is widely acknowledged that the contact center
11 industry experienced "enormous upheaval ... as a result of the pandemic." *Id.* at 34.⁶
12 Minnucci conceded as much, admitting that the pandemic caused [REDACTED]
13 [REDACTED] HX 11 ¶ 59;
14 HX 16 at 215:18–21. Because the circumstances call centers faced before and during
15 the pandemic were vastly different, it is unreasonable for Minnucci to rely on
16 ContactBabel's ASA and call abandonment figures to define pandemic-era
17 performance standards. *See Multimedia*, 2012 WL 5873711, *9; *Faust*, 2014 WL
18 3534008, *8.

19 Minnucci's reliance on the ContactBabel survey is also unreliable and
20 misplaced because, as stated in the report, its averages incorporate data from a
21 significant number of respondents (approximately 40%) that experienced *flat or*
22 *decreased call volumes* from March 2020 to November 2020. *See* HX 15 Fig. 2. [REDACTED]

23 [REDACTED]
24 [REDACTED] HX 11A. [REDACTED]

25 [REDACTED]. *Id.* Minnucci does not, and

26 ⁶ *See also* Paul Stockford, "Automation Key to COVID-19 Contact Center Crisis"
27 Contact Ctr. Pipeline (Mar. 25, 2020), <https://blog.contactcenterpipeline.com/2020/03/automation-key-to-covid-19-contact-center-crisis/> (COVID "put the
28 contact center industry in a manner of disarrayed motion the likes of which have never been seen before").

1 cannot, account for the clear differences between the unspecified survey respondents
2 and BANA's call center. *See* HX 16 at 219:22–223:1. Nor does his use of the
3 ContactBabel survey as a standard or benchmark account in any way for the fact that

4 [REDACTED]
5 [REDACTED]
6 [REDACTED] *See* HX 21 at -4091.⁷ This, too, requires exclusion of his opinions because
7 he has no reliable basis to opine that it is an industry standard or appropriate
8 benchmark for BANA based on the facts and circumstances it was facing at the time.
9 *See Multimedia*, 2012 WL 5873711, *9–10; *Faust*, 2014 WL 3534008, *8.⁸

10 Finally, Minnucci has no reliable basis to opine that the ContactBabel survey
11 provides the “industry standard” or is *the* appropriate performance benchmark for
12 BANA's Claim Call Center because it is based mostly on dissimilar call centers for
13 different industries. As the survey states, the 75-second industry average ASA
14 Minnucci relies on was computed from data submitted by mostly non-financial call
15 centers. HX 15 at 15. Yet in a follow-on report Minnucci cites (*see* HX 11 ¶ 40 &
16 n.33), ContactBabel notes that (1) the ASA for financial call centers “has been
17 considerably higher than the industry average for the past nine years” (HX 22 at 7);
18 (2) the ASA for financial call centers increased from 2013 to 2022 at a rate “much
19 higher than the industry average” (*id.* at 31); and (3) financial call centers “generally
20 . . . have a considerably higher average speed to answer than the US contact center
21

22 ⁷ Minnucci testified that it is “very common” in call center service level agreements
23 “to have a waiver clause” addressing “differences in actual volume versus forecast
24 volume if the difference is more than ten percent,” and that under such circumstances,
25 “typically all be

26 [REDACTED] HX 21 at 1.
27 *ar v. Burlington N. R. Co.*, 29 F.3d 499, 502 (9th Cir. 1994) (upholding
28 exclusion of testimony as unreliable where experts failed to explain basis for
conclusions); *Rodman*, 2021 WL 5850914, *1 (where there is simply too great an
analytical gap between the data and the opinion proffered, a court cannot permit the
expert to testify) (internal quotation omitted).

1 industry as a whole, being higher than the overall average for all of the past nine
2 years, and seeing major increases in the years of the pandemic” (*id.*). Despite this,
3 Minnucci still opines that the lower, 75-second ASA was the appropriate average and
4 benchmark. *See* HX 11 ¶ 107. This also requires exclusion of his opinions. *See, e.g.,*
5 *Goodness Films*, 2014 WL 12780291, *2–3; *Multimedia*, 2012 WL 5873711, *9.⁹

6 **B. Minnucci’s use of aggregate call center data is unreliable.**

7 Minnucci further opines that the Customer Service Class’s damages can be
8 calculated based on the assumption that every class member experienced the average
9 ASA irrespective of when they called. *See* HX 11 ¶ 107; HX 16 at 400:10–19.
10 Relying on this assumption, Plaintiffs then propose to calculate damages for the
11 Customer Service Class by multiplying the number of calls made by class members
12 to the Claims Call Center during the class period by (1) [REDACTED] (the
13 approximate difference between the ContactBabel industry average ASA and the
14 average call wait time), and (2) the California minimum wage at the time. *See*
15 *generally* ECF 324-1 at 39-40. Minnucci’s assumption, and any damages calculations
16 based on them, also must be excluded because they are purely speculative and have
17 no reliable basis in fact or the record.

18 Minnucci concedes that not all callers to the Claims Call Center experienced
19 the same wait times. *See* HX 16 at 135:8–16. Further, he acknowledges (as he must)
20 that some callers waited less than the average amount. *See id.* Thus, he necessarily
21 acknowledges that relying on the aggregate data and averages would overcompensate
22 some Customer Service Class members (to the extent they are entitled to any
23 compensation at all, which they are not).

24 Additionally, Minnucci concedes that [REDACTED]
25 [REDACTED]
26 [REDACTED].

27 ⁹ *See also Remien v. EMC Corp.*, 2008 WL 597439, *1 (N.D. Ill. Mar. 3, 2008)
28 (striking opinion where expert “arbitrarily eliminate[d] relevant portions of data that
could have been used to arrive at more complete and accurate assessments”).

1 Minnucci admits that he cannot distinguish the class members' experience from any
2 of these callers, or whether the class members' experience was the same or similar
3 or skewed by others included in this population. *Id.* at 135:18–136:23. And he did
4 not review any individual caller data or call recordings to assess how the class
5 members' experiences compared to the average or to each other. *Id.* at 137:21–138:4;
6 *see also* HX 11 App'x D. He simply throws his hands up and assumes for damages
7 that they all experienced the average ASA. *See* HX 16 at 400:10–19. Such speculative
8 and conclusory assumptions are not reliable expert opinion and must be excluded.
9 *See Claar*, 29 F.3d at 502 (affirming exclusion of expert testimony because no
10 evidence that the expert's conclusions were “based on anything more than subjective
11 belief and unsupported speculation”); *Lloyd v. Conseco Fin. Corp.*, 2001 WL
12 36097624, *6 (C.D. Cal. Oct. 19, 2001) (excluding expert opinion that “does not
13 speak clearly and directly to the issue in dispute”) (citation modified).

14 **II. Minnucci's Avoided Cost Opinions Are Unreliable.**

15 Minnucci's avoided cost opinions also must be excluded for the reasons
16 discussed above, as they too rely on ContactBabel and [REDACTED]
17 [REDACTED], rendering them unreliable
18 and inflating the purported avoided costs. *Supra* Section I.A. Separately, and in
19 addition, Minnucci's avoided workload opinions must be excluded as unreliable
20 because he relies on undisclosed data from unspecified clients from different
21 industries during periods long before the pandemic, and he cannot explain how or
22 why that data correlates to BANA's Claims Call Center and the call volume spikes it
23 experienced during the class period. HX 11 App'x H; HX 16 at 411:21–413:1.
24 Similarly, Minnucci's avoided idle time opinions also must be excluded because
25 there is no basis for the use of Erlang-C to calculate call center demand or damages
26 *ex post*, as he does to estimate avoided costs. Further, and in any event, Erlang-C is
27 not a reliable methodology here because the record shows that its underlying
28 assumptions were not present during the class period.

Each of these fatal defects warrants exclusion of Minnucci's opinions. Moreover, even if the Court were to find that some of these flaws could be addressed on cross-examination, their cumulative effect would still justify exclusion. *See Malletier v. Dooney & Bourke, Inc.*, 525 F. Supp. 2d 558, 570 (S.D.N.Y. 2007) (finding expert report and testimony unreliable "considering the cumulative effect of the numerous flaws identified"); *see also JMJ Enters., Inc. v. Via Veneto Italian Ice, Inc.*, 1998 WL 175888, *9 (E.D. Pa. Apr. 15, 1998), (granting motion to disallow expert report where expert analysis suffered from methodological flaw and significant errors), *aff'd*, 178 F.3d 1279 (3d Cir. 1999).

A. Minnucci's distinct caller demand calculations are unreliable.

Minnucci attempts to estimate the amount of distinct caller demand in the Claims Call Center—which he uses as an input to calculate BANA's purported avoided costs (*see supra* at 5-6)—by using call data that has not been produced in this case that he says he obtained from his consulting clients. HX 16 407:17–23; *see also* HX 11 App'x H. Minnucci's report provides no information about these clients or how their data was compiled. However, he subsequently testified that he obtained the data from "probably about eight clients" that included members of the property and casualty industry, health insurance clients, utilities, and a membership organization—no financial institutions. HX 16 408:16–17, 411:21–412:7. He further testified that the data was collected over a six-to-eight year period (*beginning in 2005*), that the data covered single days (not a two-month period like the class period), and that he relied on his clients to determine their own recall rates. *Id.* at 407:7–408:10, 412:17–413:1, 455:20–456:1. Minnucci's reliance on his client's data renders his caller demand estimate, as well as any purported avoided costs derived from it, unreliable for at least three reasons.

First, the aggregated client data points Minnucci relies on to estimate distinct caller demand are unreliable and cannot be used for this purpose because none of the clients operated call centers in the same industry, much less the same time period (at

1 the height of the COVID-19 pandemic), as BANA’s Claims Call Center. It is well-
2 established that “[r]esearch begins with a clear formulation of a research question”
3 and the “data to be collected and analyzed must relate directly to this question;
4 otherwise, appropriate inferences cannot be drawn.”¹⁰ For this reason, courts hold
5 that for a comparison “to have the requisite predictive capacity and the reliability
6 *Daubert* demands,” the samples selected must be “truly comparable.” *Loeffel Steel*
7 *Prods., Inc. v. Delta Brands, Inc.*, 387 F. Supp. 2d 794, 812 (N.D. Ill. 2005),
8 *amended*, 2005 WL 8178971 (N.D. Ill. Sept. 8, 2005) (internal quotation omitted);
9 *Goodness Films*, 2014 WL 12780291, *2-3 (excluding opinion for failure to
10 demonstrate comparators were sufficiently similar). Minnucci’s use of his
11 undisclosed, non-financial industry clients’ data from 2005-2013 in no way satisfies
12 this requirement. *See supra* at 5-6.

13 Second, Minnucci relied on his clients to crunch their own data and provide
14 him with recall statistics without verifying their work. *See* HX 16 407:17–23, 408:2–
15 5. This defect further renders his distinct demand calculation unreliable, as he did not
16 and cannot verify the accuracy of the data on which his opinions rest. *See McCoy*,
17 2024 WL 1705952, *11 (excluding testimony where report adopted conclusions
18 reached by others without reviewing supporting documents); *Cholakyan v.*
19 *Mercedes-Benz USA, LLC*, 281 F.R.D. 534, 546 (C.D. Cal. 2012) (excluding expert
20 declarations because expert used reports prepared by others and “engaged in little, if
21 any evaluation of their merits”); *Legendary Art, LLC v. Godard*, 2012 WL 3550040,
22 *4 (E.D. Pa. Aug. 17, 2012) (expert’s reliance on figures generated by another
23 “without independent verification, renders his analysis unreliable”).

24 Third, Minnucci’s regression model fails to account for significant variables
25 that likely impacted BANA’s recall rates that were not present in his clients’ data.
26 Most obviously, BANA’s call center was impacted by the onset of the pandemic and

27 ¹⁰ Reference Manual on Scientific Evidence: Third Edition at 311 (Washington DC:
28 The National Academies Press) *available at* <https://doi.org.10.17226/13163> (the
“Manual on Scientific Evidence”).

1 [REDACTED]
2 [REDACTED]
3 [REDACTED]. See HX 11A; HX 18 ¶ 46; HX 19 60:25–
4 61:9; HX 20. Minnucci cannot claim that any of his unspecified clients experienced
5 such unprecedented challenges in the decades prior when the data was obtained. See
6 HX 16 at 68:12–15, 115:22–116:12. This, again, renders his analysis both irrelevant
7 and unreliable. See *Kim v. Benihana, Inc.*, 2024 WL 3550390, *5 (C.D. Cal. May 20,
8 2024) (finding “regression model should have controlled for several independent
9 variables” but did not and therefore model was “unreliable and unhelpful to the trier
10 of fact under Rule 702 and under *Daubert*); *In re Live Concert Antitrust Litig.*, 863
11 F. Supp. 2d 966, 975–76 (C.D. Cal. 2012) (excluding expert analysis that assumed
12 disparity was attributable to defendant’s conduct alone and did not account for other
13 explanations); *Lloyd*, 2001 WL 36097624, *6 (excluding opinion that “fails to
14 account adequately for potentially explanatory variables”).

15 For each and all of these reasons, Minnucci’s regression analysis and any
16 related avoided cost opinions should be excluded as unreliable and irrelevant.

17 **B. Minnucci’s avoided workload calculations are unreliable.**

18 Minnucci’s computation of avoided workload charges is also flawed because
19 it is not based on the number of avoided workload hours attributable to class
20 members, and thus overestimates BANA’s purported avoided costs. To estimate
21 BANA’s purported avoided workload costs, Minnucci takes the distinct caller
22 demand he calculated based on his clients’ data (which must be excluded for the
23 reasons discussed above, *supra* Section II.A) and multiplies the figure by the average
24 call length for the Claims Call Center during the class period. HX 11 ¶ 111 & Table
25 10. From this figure he subtracts the workload hours BANA actually incurred and
26 multiplies the difference by the hourly rate BANA paid its vendors to compute total
27 workload charges allegedly avoided. *Id.* Yet Minnucci admits that this avoided
28 workload calculation relies on [REDACTED]

1 [REDACTED]. HX 16 449:11–21.
2 Accordingly, Minnucci’s cost savings calculation does not and cannot measure the
3 cost savings attributable to Customer Service Class members. *Id.* Further, Minnucci
4 admits that using only class member data would decrease his cost savings calculation,
5 but he has no way to disaggregate the data to determine what portion of the purported
6 cost savings he attributes to the class members as opposed to other callers. *Id.* at
7 451:20–452:4. This further counsels exclusion of Minnucci’s purported cost savings
8 opinions. *See McMorrow v. Mondelez Int’l, Inc.*, 2020 WL 1157191, *1 n.2 (S.D.
9 Cal. Mar. 9, 2020) (excluding damages opinion because model “does not measure
10 only the damages attributable to [plaintiffs’] liability theory”).

11 **C. Minnucci’s idle hour charges calculations are unreliable.**

12 Minnucci purports to calculate costs BANA may have avoided associated with
13 “idle” call center agent hours. *See* HX 11 ¶¶ 112–113. To do so, he takes the distinct
14 caller demand estimates, which must be excluded for the reasons discussed above,
15 *supra* Section II.A, and applies a formula called “Erlang-C” to generate a retroactive
16 estimate of BANA’s purported staffing requirements for the actual call volume
17 necessary to achieve the purported ContactBabel “industry-standard” ASA. HX 11 ¶
18 113, Table 11. In addition to the reasons above (*supra* at 17-20), Minnucci’s avoided
19 idle hour charge opinions must be excluded because his reliance on Erlang-C is
20 unreliable and unsupported by the record.

21 First, Minnucci’s reliance on Erlang-C is not consistent with the industry’s use
22 or “the practice of an expert in the relevant field,” and therefore is unreliable. *Kumho*
23 *Tire*, 526 U.S. at 152. As *Daubert* recognizes, scientific validity for one purpose does
24 not automatically confer scientific validity for all purposes. *See Daubert*, 509 U.S. at
25 591–92. Erlang-C is a mathematical equation that is sometimes used to *predict* the
26 number of agents a call center *may* need to service a given number of calls while
27 achieving a specific service level.¹¹ But that is not how Minnucci uses it here; rather,

28 ¹¹ *See* Rahul Awati, *Erlang C*, Tech Target (Mar. 3, 2022)

1 he applies Erlang-C post hoc to *compute purported cost savings*. See HX 11 ¶¶ 112–
2 13. Yet he and Plaintiffs have no “verifiable evidence” that could show that Erlang-
3 C has ever been used in this manner by the scientific community. *Daubert*, 43 F.3d
4 at 1317-18. Absent such evidence—and the record contains none—his idle work
5 hours calculation should be excluded. See *Daubert II*, 43 F.3d at 1316 (“objective,
6 independent validation of the expert’s methodology” is required).

7 Second, Minnucci’s idle hours cost savings calculation is unreliable because
8 the assumptions built into the Erlang-C model run counter to the facts of this case.
9 For example, Erlang-C assumes independent and random call arrivals (*i.e.*, a
10 “Poisson process”), but “doesn’t work if customer requests are not independent or
11 triggered by a common event [like] natural disasters.”¹² This makes Erlang-C
12 particularly inappropriate to use during times when call volumes are spiking as a
13 result of common causes like a pandemic, or [REDACTED]

14 [REDACTED]—as was the case here. See *supra* at 2-3.
15 Similarly, as Minnucci conceded at his deposition, Erlang-C “assumes infinite caller
16 patience,” meaning a caller will stay on hold for as long as it takes to have her call
17 answered. HX 16 at 442:14–17. But Minnucci admits that [REDACTED]

18 [REDACTED]
19 [REDACTED] HX 11 ¶¶
20 48, 109; HX 16 at 442:4–5. And as published studies have found, Erlang-C error rates
21 are “*highly correlated*” with realized abandonment rates.¹³

22 Erlang-C further assumes that all customer service representatives handling
23 calls are “statistically identical” and equally skilled.¹⁴ HX 16 at 436:5–437:10. But

24 <https://www.techtarget.com/searchunifiedcommunications/definition/Erlang-C>
25 ¹² *What is Erlang, and Why Does it Matter*, cxtoday (Nov. 25, 2022)
<https://cxtoday.com/contact-center/what-is-erlang-and-why-does-it-matter/>.

26 ¹³ Thomas R. Robbins, *Evaluating the Performance of the Erlang Models for Call*
27 *Centers*, at 14, 24, <https://myweb.ecu.edu/robbinst/PDFs/S-12130-TR.pdf>; see also
28 Thomas R. Robbins, D.J. Medeiros and Terry P. Harrison, Working Paper “*Does the Erlang C Model Fit in Real Call Centers?*” (2010) §§ 2, 4.3, 5.

¹⁴ See Robbins, “*Evaluating the Performance of the Erlang Models for Call Centers*”
at 4.

1 Minnucci admits this was not the case, and that more experienced agents are often
2 able to handle calls more efficiently than newer agents. *See id.* at 437:12–15
3 (testifying that representatives in “every call center” vary as to speed and level of
4 performance). And regardless of skill, some calls and caller issues take longer to
5 resolve than others, which Erlang-C also cannot account for.¹⁵ Thus, because the
6 assumptions built into the Erlang-C model are hopelessly at odds with the actual
7 facts, Minnucci’s idle hours cost savings calculation should be excluded. *See Bakst*
8 *v. Cmty. Mem’l Health Sys., Inc.*, 2011 WL 13214315, *20 (C.D. Cal. Mar. 7, 2011)
9 (excluding damages calculation based on expert’s “factual assumptions that are
10 entirely unsupported in the record”); *United States v. Rushing*, 388 F.3d 1153, 1156
11 (8th Cir. 2004) (upholding exclusion where expert made “assumptions contrary to
12 the established facts of the case”).

13 **III. Minnucci’s WFM Model Opinions Are Uninformed And Unhelpful.**

14 Minnucci opines that [REDACTED]
15 [REDACTED] *See* HX 11 ¶¶ 63–66. Specifically,
16 Minnucci opines that [REDACTED]
17 [REDACTED]
18 [REDACTED]
19 [REDACTED] *Id.* ¶¶ 63–65. His opinion is based on a [REDACTED]
20 [REDACTED]
21 [REDACTED]. *See id.* These
22 opinions should also be excluded because they are contradicted by the record,
23 Minnucci’s own professional practice, and the practices of his clients.

24 As a threshold matter, Minnucci’s opinion is not supported by the record, and
25 therefore is unreliable and irrelevant. *See Payan v. Los Angeles Cmty. Coll. Dist.*,
26 2019 WL 8163479, *3–4 (C.D. Cal. June 13, 2019) (excluding expert report based
27 on factual assumptions contradicting the record as “entirely speculative . . . [and]
28

¹⁵ *See* Robbins, *supra* note 14 at 4.

1 unhelpful to the jury”). [REDACTED]

2 [REDACTED]
3 [REDACTED]
4 See HX 23 Ex. 15; HX 11 ¶ 65; see also HX 24 ¶¶ 18(a)(ii), 42. Minnucci
5 acknowledges this discrepancy, and concedes the model would be [REDACTED]

6 [REDACTED] HX 11 ¶ 65.

7 Nevertheless, he opines—with the benefit of hindsight—that it could have been used
8 to generate forecasts for the Claims Call Center that “would likely still meet industry
9 standard accuracy rates.” *Id.* ¶ 65; HX 16 at 284:13–17. This is not reliable expert
10 testimony.

11 Indeed, Minnucci’s report cites no support for the proposition that [REDACTED]

12 [REDACTED]
13 [REDACTED] And the record
14 shows it did not, as Minnucci admitted his own analysis revealed that [REDACTED]

15 [REDACTED]
16 [REDACTED] HX 16 at 288:7–13, 288:19–20. Further, and in any event,
17 Minnucci does not explain exactly how the purported [REDACTED] would have
18 permitted [REDACTED]

19 [REDACTED]
20 [REDACTED]
21 [REDACTED] See HX 11 ¶ 61 (accepting five-to-seven week lead time required for
22 new agents). For each and all of these reasons, Minnucci’s characterization of the
23 [REDACTED] is highly
24 speculative, unsupported, and unreliable. See *Brighton*, 923 F. Supp. 2d at 1255
25 (excluding opinion because “expert has not grounded his assumption with the real
26 world facts of this case”); *Robinson v. G.D. Searle & Co.*, 286 F. Supp. 2d 1216,
27 1221 (N.D. Cal. 2003) (opinion “lacks sufficient factual basis as required . . . and is
28 therefore inadmissible” where contradicted by record).

1 Minnucci's contention that [REDACTED]
2 [REDACTED] should also be
3 excluded because it is contrary to his own experience and otherwise devoid of
4 support. *See U.S. Aviation Underwriters*, 2024 WL 2948626, *25 (excluding expert
5 testimony on this basis). Minnucci's report cites nothing to indicate that single-
6 variable forecasting is an accepted industry practice, much less that it can and would
7 have accurately achieved the results he says BANA's call center should have
8 achieved. Further, at his deposition, Minnucci testified that he could not recall a
9 *single instance* in which he or anyone else generated staffing forecasts using a single
10 variable. HX 16 at 291:21–292:4. He further conceded that planning staffing needs
11 for his own clients during the pandemic was “not just simple forecasting,” but instead
12 relied on “a lot of factors,” including “any factors that you can identify and quantify
13 to be able to forecast.” *Id.* at 76:12–17, 242:11–15. Because Minnucci's hindsight
14 opinions are once again contrary to what he (and others) do in the field, they should
15 be excluded. *See In re Incretin-Based Therapies*, 524 F. Supp. 3d at 1044 (excluding
16 opinion due to “discrepancy between what [expert] endorses in this litigation and in
17 the scientific community”).

18 **IV. Minnucci's State of Mind Opinions Are Improper.**

19 It is well-established that, absent personal knowledge, an expert's testimony
20 on another's “subjective state of mind and motives [is] impermissible.” *A.B. v. Cnty.*
21 *of San Diego*, 2020 WL 4431982, *3 (S.D. Cal. July 31, 2020); *Aya Healthcare*
22 *Servs., Inc. v. AMN Healthcare, Inc.*, 613 F. Supp. 3d 1308, 1320–21 (S.D. Cal. 2020)
23 (expert opinions on “intent, motives or states of mind . . . have no basis in any relevant
24 body of knowledge or expertise”) (internal quotation omitted), *aff'd*, 9 F.4th 1102
25 (9th Cir. 2021). Yet Minnucci repeatedly opines that BANA “deliberately”
26 understaffed the Claims Call Center. *E.g.*, HX 11 ¶¶ 15, 51, 59–61, 63, 66, 69, 70,
27 74, 78, 81, 82, 101, 113. These are clearly improper expert opinions that must be
28 excluded. *E.g.*, *Kawasaki Jukogyo Kabushiki Kaisha v. Rorze Corp.*, 2025 WL

1 1407350, *9 (N.D. Cal. May 12, 2025) (excluding state of mind opinion); *Gold v.*
2 *Lumber Liquidators, Inc.*, 323 F.R.D. 280, 294 (N.D. Cal. 2017) (same). Moreover,
3 Minnucci's opinions are unreliable and irrelevant because they are contradicted by
4 the record and witness testimony, which Minnucci did not fully review.¹⁶ See HX 16
5 at 145:9–146:3, 357:17–358:18.

6 CONCLUSION

7 For the reasons detailed above, this Court should grant this motion and exclude
8 Minnucci's opinions concerning (1) the industry average or performance benchmark
9 applicable to the Claims Call Center during the class period, (2) the actual wait time
10 experienced by the Customer Service Class members, and any damages or avoided
11 cost calculations relying on them. Additionally, for the reasons detailed above, the
12 Court should further exclude (3) Minnucci's avoided cost opinions, (4) his opinions
13 concerning the reliability and potential use of the [REDACTED]
14 [REDACTED] and (5) any opinion he has or intends to offer concerning
15 BANA's intent or state of mind in staffing the Claims Call Center.
