1 The Opposition (ECF 614, Opp.) does not dispute many of the issues that were
2 demonstrated in BANA’s Motion to Exclude Jay Minnucci (ECF 564-1, Mot.). It
3 merely argues that these demonstrated flaws in Minnucci’s analysis can all be
4 addressed through cross examination. But *Daubert* admonishes district judges to be
5 “gatekeepers,” and the “opportunity for vigorous cross examination . . . is not a basis
6 for allowing otherwise inadmissible testimony to be admitted.” *Loeffel Steel Prods.,*
7 *Inc. v. Delta Brands, Inc.*, 387 F. Supp. 2d 794, 800 (N.D. Ill. 2005). Fundamentally,
8 Minnucci’s opinions cannot satisfy Rule 702, 703, or *Daubert* because they do not
9 consider or account for the unique circumstances facing the Claims Call Center, rely
10 on data that Minnucci did not review and that treats disparate call centers as fungible
11 and assumes non-class members acted the same as class members, and are contrary
12 to Minnucci’s own professional experience and the evidence in the case. These are
13 not minor flaws that a jury can discount; they are core issues that merit exclusion.

14 ARGUMENT

15 **I. Minnucci’s Damages Inputs and Calculations Should Be Excluded.**

16 **A. Minnucci’s industry standard opinions should be excluded.**

17 In its moving brief, BANA demonstrated that Minnucci’s industry standard
18 opinions—and any damages calculations based on them—are unreliable because they
19 are based on third-party data that Minnucci admittedly knows almost nothing about,
20 are inconsistent with industry practice and his own professional experience, and rely
21 on indefensible apples-to-oranges comparisons. Mot. 10-15. Plaintiffs do not dispute
22 many of these criticisms. Instead, they argue that experts are permitted to testify to
23 industry standards, and claim that they may do so by relying “heavily” on their
24 knowledge and experience. *See* Opp. 8. Accordingly, they claim Minnucci can rely
25 on ContactBabel to set the industry standard applicable to the Claims Call Center
26 during the Customer Service class period because it is “fully consistent with his
27 knowledge of the industry and his client experiences.” *Id.* Tellingly, though,
28 Plaintiffs do not identify any “client experiences” that Minnucci had at call centers

1 remotely like the Claims Call Center during the COVID-19 pandemic—which
2 indisputably experienced a [REDACTED]
3 [REDACTED] See Mot. 2-3. And Plaintiffs significantly understate the extent to
4 which Minnucci relies on ContactBabel’s work to opine on what the industry
5 standard purportedly was at the height of the COVID-19 pandemic. See Opp. 8-9.

6 Indeed, the ContactBabel survey is the linchpin of Minnucci’s industry
7 standard opinions and Plaintiffs’ call center damages model. See Mot. 10. Minnucci
8 simply took 2020-2021 post hoc data from the cross-industry survey and declared
9 that it was the “industry standard” and performance benchmark for the Claims Call
10 Center during the narrower Customer Service Class period. See HX 11 ¶¶ 19-20;
11 Mot. 10-11, 13. He did so despite not reviewing *any* of the underlying data on which
12 the report was based and not knowing: (1) how many or what divisions or
13 departments each respondent call center had; (2) whether any of the respondents
14 experienced significant increases or decreases in call volumes; (3) whether any of the
15 respondents were targeted by criminals or fraudsters; or (4) even what time period(s)
16 each respondents’ data covered. See Mot. 11. Plaintiffs do not dispute this. See Opp.
17 8-9, 12. They simply claim that Minnucci had no obligation to familiarize himself
18 with the data because the survey is “accepted as reliable within the industry,” and
19 because experts are granted “wide latitude to offer their opinions.” Opp. 8-9. This
20 misstates the requirements of Federal Rule of Evidence 703 and *Daubert*.

21 Rule 703 does not permit experts to use third-party data without a reasonable
22 understanding of what the data contains.¹ See, e.g., *OCG Energy, LLC v. Shen*, 2024
23 WL 694912, *11 (C.D. Cal. Feb. 12, 2024) (expert cannot “testify as to documents
24 and facts as to which he lacks knowledge”); see also Mot. 10-11. Further, Rule 703

25
26 ¹ For this reason, Plaintiffs’ reliance on *Fortune Dynamic, Inc. v. Victoria’s Secret*
27 *Stores Brand Mgmt., Inc.* (Opp. 15) is off point. 618 F.3d 1025 (9th Cir. 2010). There,
28 the court upheld a survey conducted by the expert who was able to explain the
survey’s methodology and contents. *Id.* 1037. Here, Minnucci adopted a survey he
did not conduct and relying on data he has never seen and cannot explain. See Mot.
11-13.

1 states that an expert can rely on facts or data only “[i]f experts in the particular field
2 would reasonably rely on those kinds of facts or data in forming an opinion on the
3 subject.” Here, there has been no showing that other experts in the call center industry
4 use cross-industry ContactBabel surveys in the manner that Minnucci uses them
5 here—which is to set *the* performance benchmark for a call center irrespective of the
6 facts, circumstances, or service agreements specific to that call center. *See* Mot. 12.

7 To the contrary, Minnucci testified that cross-industry averages like the
8 ContactBabel figures are “[REDACTED]
9 [REDACTED]” HX 16 202:3-5 (emphasis added); *see also id.* 180:2-7, 180:11-12. Minnucci
10 also conceded that performance benchmarks change depending on “[REDACTED]
11 [REDACTED]” not
12 industry averages. HX 51 194:8-13. And as he testified, industry practice is generally
13 to [REDACTED]
14 [REDACTED] (HX 16 180:1-15)—just as [REDACTED]. *See* Mot. 14
15 n.7.²

16 Minnucci’s “industry average” opinions also are unreliable and should be
17 excluded because Plaintiffs cannot demonstrate that *any* of the respondent call
18 centers—much less the majority or all of them—are aptly comparable to the Claims
19 Call Center, which Plaintiffs admit “experienced an [REDACTED]
20 [REDACTED] during part of the class period” (Opp. 13). *See* Mot. 12-15. Plaintiffs also do
21 not dispute this. *See* Opp. 10-12. Nor do they dispute that Minnucci did not attempt
22 to account for the many differences that existed between the Claims Call Center and
23 the ContactBabel survey respondents in propounding his “industry standard.” *See id.*

24
25 ² The Opposition admits that [REDACTED]
26 [REDACTED] Opp. 13
27 n.7 (emphasis in Opp.; citing HX 21). In doing so, Plaintiffs (and Minnucci) ignore
28 two critical points. First, [REDACTED]
[REDACTED] (HX 21 at 1), which Minnucci did not attempt
to do. *See* Mot. 13. Second, there is no evidence that EDD ever took the position that
BANA’s call center efforts were not commercially reasonable.

1 Indeed, there is no evidence that indicates that even one of the ContactBabel
2 respondents had to deal with a [REDACTED], or offered a service
3 [REDACTED], or had their [REDACTED]
4 [REDACTED]. See Mot. 11, 13-14.
5 Moreover, the report itself confirms that many respondents did not, as evidenced by
6 the fact that they reported flat or *decreasing* levels of demand. See HX 15 Fig. 2.
7 These critical differences are not mere “disputes about the appropriateness of a
8 benchmark” that can be addressed on cross-examination, as Plaintiffs contend (Opp.
9 12). *Daubert* and Rule 702 require more: experts must show the comparators they
10 relied on are “tethered to the relevant facts and circumstances of the present case.”
11 *Multimedia Pat. Tr. v. Apple Inc.*, 2012 WL 5873711, *9 (S.D. Cal. Nov. 20, 2012);
12 *see also Goodness Films, LLC v. TV One, LLC*, 2014 WL 12780291, *2-3 (C.D. Cal.
13 May 19, 2014) (excluding expert opinion because they did not show comparators
14 were sufficiently similar). Minnucci did not, thus his opinions should be excluded.³

15 Plaintiffs’ blanket assertion that “disputes about the appropriateness of a
16 benchmark go to weight” (Opp. 12) is not supported by the cases that they cite.
17 *Roblox v. WowWee Grp., Ltd.* found the expert’s opinion “sufficiently reliable”

18 ³ Plaintiffs’ attempt to distinguish BANA’s cases excluding analyses based on
19 inappropriate comparisons falls flat. See Opp. 14. In *Goodness Films, LLC*, the court
20 did not rely on plaintiffs’ argument that their expert’s examples were “not meant to
21 be comparisons”; rather, it found that “to the extent that [the expert] provides
22 comparisons . . . he has not identified *relevant, similar comparisons*.” 2014 WL
23 12780291, *2 (emphasis added). That is precisely the problem here. See Mot. 11-15.
24 *Faust v. Comcast Cable Commc’ns Mgmt., LLC*, 2014 WL 3534008, (D. Md. July
25 15, 2014) did not turn on the fact that the plaintiff said it would forgo expert
26 testimony. The court struck the expert’s report because it sought to establish a fact
27 about call center workers in Maryland based on an analysis of practices at the
28 defendant’s Pennsylvania call centers because there was “nothing . . . that would
support the extrapolation of conclusions concerning [workers] in Pennsylvania call
centers with those working in” Maryland. *Id.* *5. In *Remien v. EMC Corp.*, 2008 WL
597439 (N.D. Ill. Mar. 3, 2008) the court excluded the expert because his
“methods”—not his “concessions” (Opp. 14)—failed to provide “a minimum level
of reliability [to] his opinions.” *Id.* *3. Finally, Plaintiffs cite no authority for their
claim that the rationale in *Multimedia Pat. Tr.*, which rejected an analysis like
Minnucci’s based on “generic industry data” because it was not tethered to the
relevant facts and circumstances of the case, 2012 WL 587311, *9, is solely
applicable to patent cases. Opp. 14.

1 because he showed “baseline comparability” and “appears to have made both
2 downward and upward adjustments . . . to account for differences” between
3 benchmark and comparator. 2024 WL 4057418, *14 (S.D. Cal. Sept. 3, 2024).
4 Minnucci did not do that here. *See supra* at 1-4; Mot. 10-15. Plaintiffs’ curious cite
5 to *Sonos v. Google, LLC* is misleading, as there the court *rejected* the benchmark due
6 to lack of comparability, stating “[d]istrict judges are admonished to be ‘gatekeepers’
7 and “[t]his gate should remain firmly closed.” 2023 WL 3933071, *6 (N.D. Cal. June
8 9, 2023) (quoting *Daubert v Merrell Dow Pharms., Inc.*, 509 U.S. 579, 596-97
9 (1993)). *Krommenhock v. Post Foods, LLC*, 334 F.R.D. 552 (N.D. Cal. 2020) is also
10 of no help. There the court allowed price studies *designed and conducted by the*
11 *expert, id.* at 574-76, not a third-party survey that Minnucci simply adopts as the
12 “industry standard” despite not knowing its specifics or respondents, or how they
13 compared to the call center at issue. *See supra* at 1-4.

14 To the extent Plaintiffs argue Minnucci’s industry standard opinions should
15 not be excluded because it would leave them unable to prove their case (Opp. 12 n.6),
16 that is a problem of their own making and is not a legal basis for denying exclusion.
17 Summary judgment is frequently granted for defendants in these circumstances. *See,*
18 *e.g., In re Live Concert Antitrust Litig.*, 863 F. Supp. 2d 966, 1000 (C.D. Cal. 2012).
19 If anything, Plaintiffs’ argument highlights the importance of ensuring that
20 unsupported, unreliable and improper opinions are not presented to a jury.

21 **B. Minnucci’s use of aggregate call center data is unreliable.**

22 Plaintiffs do not dispute that Minnucci’s calculation of Customer Service Class
23 damages [REDACTED], and assumes that all
24 callers experienced the same wait times. *See* Opp. 15; Mot. 15-16. Plaintiffs also
25 readily admit that the underlying assumption is not true, as “of course . . . some class
26 members waited shorter or longer times than the average.” Opp. 15. Plaintiffs claim
27 Minnucci can calculate damages this way because the “issue is the Bank’s aggregate
28 damages liability, which is permissibly based on averages.” *Id.* In support, Plaintiffs

1 cite two cases. But in each, the experts calculated damages based on actual data
2 pertaining to *class members only*, and provided further analysis to assess whether
3 their calculations were reliable. *See Ngethpharat v. State Farm Mut. Auto. Ins. Co.*,
4 2025 WL 2161754, *11 (W.D. Wash. July 29, 2025); *Khadera v. ABM Indus. Inc.*,
5 2011 WL 6813454, *1 (W.D. Wash. Dec. 28, 2011).

6 Plaintiffs also argue Minnucci can rely on aggregated data because [REDACTED]
7 [REDACTED] but their case in support is distinguishable.
8 *See* Opp 16. Again, there, the data the expert analyzed was limited to class members
9 only, and the expert merely estimated the number of weeks they worked using data
10 reflecting *each class members'* actual employment dates. *Ruiz v. XPO Last Mile, Inc.*,
11 2017 WL 2263046, *3 (S.D. Cal. May 23, 2017). Here, Minnucci purports to estimate
12 individual call wait times for a heterogenous class using data that [REDACTED]
13 [REDACTED] *See* Mot. 15-16. Minnucci's belief that it was "reasonable for him to
14 conclude that 'EDD cardholders experienced the same average wait times as all
15 prepaid cardholders routed to the same call centers'" does not make it so. *See* Opp.
16 16. There is no dispute that Minnucci did not attempt to determine how class
17 members' actual wait times compared to the average (*see* Mot. 16; Opp. 15-16), or
18 how [REDACTED]
19 [REDACTED]. Thus, his opinion is unreliable and should be excluded.⁴

20 **II. The Opposition Confirms the Avoided Cost Opinions Are Not Reliable.**

21 **A. Minnucci's distinct caller demand calculations are not reliable.**

22 Plaintiffs also do not dispute that Minnucci's distinct caller demand analysis
23 does not account for the significant differences between Minnucci's non-financial
24 institution clients (from which he obtained the 2005-2013 data that he used to build
25 his regression model) and the Claims Call Center during the class period (for which

26 ⁴ Plaintiffs' claim that Minnucci's conclusion is based on "his experience and
27 expertise" (Opp. 15) is refuted by his own testimony. Minnucci admitted that he has
28 no experience working with call centers like BANA's who experienced [REDACTED]
[REDACTED] during the COVID-19 pandemic.
See, e.g., HX 51 60:24-61:5, 65:24-66:14, 114:24-115:7; HX 16 219:22-223:1.

1 he purports to predict re-call rates using the model). *See* Mot. 17-19. They first blame
2 BANA for not maintaining the data Minnucci claims he would need to conduct an
3 “exact” analysis, and argue Minnucci was left to turn to the “next best thing”—which
4 he deemed to be undisclosed data dating back more than two decades from a handful
5 of non-financial services industry clients. *See* Opp. 17-18; Mot. 17.

6 Plaintiffs claim that Minnucci’s reliance on this data is “permissible” because
7 he determined that the “relationship between [the] abandonment rate and [the] re-call
8 rate” for his clients remained “fairly constant across industries and time.” Opp. 18.
9 But Minnucci did not offer any analysis or citation to support this opinion in his
10 Report, and the Opposition’s citations either do not discuss this issue at all, or are
11 completely silent as to its consistency over time. *See* Opp. 18. *Daubert* required
12 Minnucci to show that the non-financial services call centers whose decades-old data
13 he used are sufficiently comparable to BANA to make using their data to predict
14 BANA’s re-call rates reasonable. *See, e.g., Loeffel*, 387 F. Supp. 2d at 812 (“to have
15 the requisite predictive capacity and the reliability *Daubert* demands, [expert] had to
16 select samples that are truly comparable”) (internal quotations omitted). He did not,
17 so his opinions are unreliable. *See* Mot. 17-19.

18 Plaintiffs next try to excuse Minnucci’s failure to confirm that his clients
19 calculated their own re-call rates correctly by claiming that experts are allowed to
20 rely on others to collect data. *See* Opp. 19. But the problem is not that Minnucci relied
21 on his clients to *collect* data; it is that he relied on his clients to derive re-call rates
22 using their data and did not even spot check their work before dropping it into his
23 model. *See* HX 16 407:17-23, 408:2-5. This also makes his analysis unreliable and
24 merits exclusion. *See* Mot. 18 (citing cases). And, although “it is true that an expert
25 opinion may be based on data collected by others, such facts must be of the type that
26 are ‘reasonably relied upon by experts in the particular field.’” *Heisler v. Maxtor*
27 *Corp.*, 2011 WL 1496114, *8 (N.D. Cal. Apr. 20, 2011) (*quoting* Fed. R. Evid. 703
28 and *citing Southland Sod Farms v. Stover Seed Co.*, 108 F.3d 1134, 1142 (9th Cir.

1 1997)). Here, there has been no showing that other call center experts calculate
2 distinct caller *ex post* demand using decades-old, cross-industry data compiled by
3 their clients at random time intervals. The best Plaintiffs can do is to claim that
4 *Minnucci* has previously billed his clients for unspecified “similar analyses.” Opp.
5 18. That unsupported assertion is not enough. *See In re Incretin-Based Therapies*
6 *Prods. Liab. Litig.*, 524 F. Supp. 3d 1001, 1044 (S.D. Cal. 2021); Mot. 12.

7 Finally, Plaintiffs argue that the Court can ignore the many incongruities
8 between his clients and BANA because *BANA* has not demonstrated that controlling
9 for things like the absence of a global pandemic, [REDACTED]
10 [REDACTED] would have changed Minnucci’s results. *See* Opp. 20. Plaintiffs
11 attempt to distinguish *In re Live Concert* to support this argument. But there, the
12 court found that although there “must be some indication that the excluded variables
13 would have impacted the results,” the “burden of proof . . . remains on the proponent
14 of the expert testimony.” 863 F. Supp. 3d at 974. Given Minnucci’s testimony that
15 COVID-19 led to higher abandonment rates for his clients (HX 16 215:18-21), and
16 the general consensus that COVID-19 wreaked havoc in the call center industry (*see*
17 Mot. 13), there is far more than an indication that factoring the impact of COVID-19
18 alone would have changed Minnucci’s results. Minnucci did not attempt to account
19 for that, or any of the other unique challenges or circumstances facing BANA’s call
20 center in calculating distinct caller demand. Mot. 15, 17-18. His calculations should
21 be excluded for this reason too. *Id.*

22 **B. Minnucci’s avoided workload calculations are not reliable.**

23 Plaintiffs concede Minnucci’s avoided workload calculations are not limited
24 to hours attributable to the class members, and thus overestimate alleged avoided
25 costs. *See* Opp. 20; Mot. 19-20. Plaintiffs only answer is that [REDACTED]
26 [REDACTED] Opp. 20. But they cite
27 no authority excusing them from putting forth a calculation that matches their theory
28 of liability. Minnucci made no attempt to do so, thus his opinion must be excluded.

1 *See McMorrow v. Mondelez Int'l, Inc.*, 2020 WL 1157191 *1 n.2 (S.D. Cal. Mar. 9,
2 2020) (excluding damages opinion that did not match liability theory).

3 **C. Minnucci's calculation of idle hour charges are not reliable.**

4 Plaintiffs do not deny that Minnucci's use of Erlang-C to calculate idle hour
5 costs is unorthodox; they simply claim "there is no reason [Erlang-C] cannot be
6 applied" in this manner. Opp. 22. But *Daubert* does not permit random applications
7 of industry tools simply because they are possible; rather, it requires "objective,
8 independent validation of [an] expert's methodology." *Daubert v. Merrell Dow*
9 *Pharms., Inc.*, 43 F.3d 1311, 1316 (9th Cir. 1995). Neither Minnucci nor Plaintiffs
10 can point to a single example of any other professional in the call center industry who
11 has used Erlang-C post hoc to *compute purported cost savings*. See Opp. 21-22. Thus,
12 exclusion is appropriate. See Mot. 20-21.⁵

13 Minnucci's idle cost savings opinions are also unreliable and should be
14 excluded because the model's assumptions run counter to the facts of this case. See
15 Mot. 21-22. Plaintiffs do not dispute this, nor do they attempt to address the
16 incongruities between Erlang-C's assumptions and reality. Instead, they seek to
17 misdirect, arguing that the authority cited in BANA's Motion showing that Erlang-C
18 produces unreliable results when caller abandonment is high should not be
19 considered. See Opp. 22. But Minnucci himself testified that Erlang-C's assumptions
20 were not met here. See Mot. 21-22. Thus, his use of the model and related opinions
21 must be excluded. *Brooke Grp. Ltd. v. Brown & Williamson Tobacco Corp.*, 509 U.S.
22 209, 242 (1993) ("when indisputable record facts contradict or otherwise render the
23 opinion unreasonable, it cannot support a jury's verdict").

24 **III. The Opposition Concedes the WFM Opinions Are Improper.**

25 BANA's Motion demonstrated that Minnucci's WFM opinions are unreliable

26 ⁵ *JH Kelly, LLC v. AECOM Tech. Servs., Inc.*, 605 F. Supp. 3d 1295 (N.D. Cal. 2022),
27 cited at Opp. 22, does not hold otherwise. There, an expert declared under penalty of
28 perjury that his method had been "published in numerous peer-reviewed scientific
journals," "ha[d] been 'tested,'" and "ha[d] a 'known' rate of error." *Id.* at 1311. The
same cannot be said of Minnucci's *post hoc* application of Erlang-C here.

1 and irrelevant, and therefore must be excluded, because they are contradicted by the
2 record and Minnucci's own professional experience. Mot. 22-24. In response,
3 Plaintiffs repeat their mantra that these issues go to weight, not admissibility. Opp.
4 23-24. But Plaintiffs do not contest that Minnucci has no experience to rely on
5 forecasting in this manner because he has never forecasted using a single variable,
6 and has he ever attempted to forecast UI payment volumes during a global pandemic.
7 See Mot. 24. Thus, he has no basis or relevant experience to support his opinion that

8 [REDACTED]
9 [REDACTED]. See *id.* These issues, and others, go squarely to
10 reliability and merit exclusion of Minnucci's WFM opinions. See *id.*

11 **IV. The Opposition Confirms the State of Mind Opinions Are Improper.**

12 Plaintiffs attempt to disavow Minnucci's opinions regarding BANA's
13 purported intent and state of mind. See Opp. 25. But they cannot dispute that
14 Minnucci explicitly offered such opinions. Mot. 24 (citing 15 paragraphs in Report
15 where Minnucci claimed BANA "deliberately" took actions). Each of those opinions
16 must be struck because case law holds that, absent some particular qualification or
17 expertise, an expert may not opine on another's state of mind in a *civil* case. Mot. 24-
18 25. Plaintiffs' first rejoinder, which notes that Rule 704(b)'s preclusion of state of
19 mind testimony in criminal cases does not apply here, is nonresponsive. See Opp. 24.
20 Their second, relying on *North Wind Constr. Servs., LLC v. Campos EPC, LLC*, 2023
21 WL 196618 (D. Idaho Jan. 13, 2023), is of no help either. In *North Wind*, the court
22 denied a motion to exclude state-of-mind testimony based on the expert's "close
23 relationship" with the defendant which the court found made "him more-than-usually
24 qualified to draw . . . inferences" about the defendant's intent. *Id.* *5. Minnucci does
25 not claim to have any such relationship with or knowledge of BANA.

26 **CONCLUSION**

27 For the foregoing reasons and the reasons stated in BANA's Motion, the Court
28 should strike each and all of Minnucci's unreliable and irrelevant opinions.
