1 Plaintiffs' expert, Chloe N. East proposes to calculate class members' damages
2 based on the amount it would, hypothetically, have cost them to incur credit-card
3 debt at a 20.8% interest rate. BANA moved to exclude East's opinions because her
4 opinions are not a relevant or reliable measure of actual damages (if any) suffered by
5 the classes. *See* ECF 565-1 (Mot.). East claims that the 20.8% interest rate is
6 "representative" of some unspecified other harm suffered by some unspecified "large
7 number" of class members. East does not claim that her rate leads to an accurate or
8 reliable damages figure. She merely claims it is a "conservative" "minimum bound"
9 for damages for the classes. But her opinion does not even pretend to be a reliable
10 way of measuring the harm *actually* suffered by even the unspecified "large number"
11 of class members—much less any harm *uniformly* suffered across the class. Thus, it
12 should be stricken under the *Daubert* standard.

13 Plaintiffs admit that East considered no data or information on actual class
14 member behavior or harm. Nor does she claim that her damages estimates apply to
15 every class member, or to *any* individual class member. Instead, East simply looked
16 to research concerning the effects of a permanent deprivation of UI benefits during
17 pre-pandemic time periods and concluded that class members faced with a temporary
18 loss of COVID-related benefits would have borrowed on their credit cards at a 20.8%
19 interest rate to cover the shortfall, regardless of whether that shortfall [REDACTED]
20 [REDACTED] or [REDACTED]. But *Daubert* requires that an expert's
21 opinions and assumptions be anchored in evidence, not guesswork. East's analysis
22 falls far short of the baseline requirements for admissibility and should be excluded.

23 ARGUMENT

24 East's proposal to measure damages based on a 20.8% credit-card interest rate
25 is unreliable and unrooted in any evidence about credit-card borrowing or interest
26 payments by class members, if any. Mot. 8-14. That was the basis behind the Court's
27 exclusion of the identical damages methodology proposed by Plaintiffs' purported
28

1 expert, Greg Regan.¹ The Court ruled that Regan’s proposal to base a classwide
2 damages calculation on credit-card interest rates was “not . . . a damages model that
3 satisfies *Comcast*” because it “[REDACTED]
4 [REDACTED],” and the assumption that “impacted
5 cardholders would likely have needed” to “utiliz[e] credit cards” was not “supported
6 . . . with evidence showing that th[is] assumption [is] true as to most or even any of
7 the EDD cardholders’ experience.” ECF 494 at 87-88.

8 Thus, it is curious that Plaintiffs’ initial response to the motion to strike East’s
9 repeat of the same flawed analysis is to defend it as a method *approved* by the Court
10 in its certification ruling. *See* ECF 611 (Opp.) at 5-6, 11-12. This is false. The method
11 approved by the Court was “Methodology 1,” a generalized proposal to award
12 damages based on an “interest rate that reflects the ‘time value of money.’” ECF 494
13 at 86. But the Court *rejected* Regan’s “Methodology 2,” for having exactly the same
14 shortcoming that dooms East’s analysis: it was “not supported . . . with evidence
15 showing that [its] assumptions” about credit-card borrowing “are true as to most or
16 even any of the EDD cardholder[s]” at issue. *Id.* at 88; *see also* Mot. 12.

17 To avoid the clear implications of the Court’s ruling that Methodology 2
18 requires (but lacks) an evidentiary showing that the underlying assumptions are true
19 on a classwide basis, Plaintiffs argue that the Court’s ruling relates solely to [REDACTED]
20 [REDACTED] Opp. 12. The ruling itself does not
21 support this constrained reading. The Court “[f]irst” ruled that “the Remediation Plan
22 does not support a damages model that satisfies *Comcast*.” ECF 494 at 87 (emphasis

23
24 ¹ BANA has also moved to exclude Regan’s opinions and the opinions of Plaintiffs’
25 third damages expert, David Levine. *See* ECF 566, 567. As explained in BANA’s
26 motions and replies, East’s and Levine’s damages opinions—and Regan’s damages
27 calculations to the extent he relies on East and Levine and offers his own interest rate
28 opinions—all generally suffer from the same maladies: each purport to offer damages
opinions that are not “supported with evidence showing that the[ir] assumptions are
true as to most or even any” class members. ECF 494 at 88. As such, many of
Plaintiffs’ arguments in opposition to Levine and Regan closely parallel those made
in the East Opposition, and BANA incorporates the arguments made in its reply in
support of its motion strike Levine and Regan herein.

1 added). *Then* the Court “[a]dditionally” ruled that Methodology 2 was an unreliable
2 classwide damages methodology because Regan did not support his “assumptions
3 about class members” with any “evidence” about actual class member experiences.
4 *Id.* As BANA explained in its Motion (at 11-13), that is precisely the issue here. Like
5 Regan, East failed to support her assumptions about class members with any evidence
6 about *actual* class member experiences. Both the class certification order and the case
7 law relied upon in BANA’s opening brief (Mot. 8-13) require that East make
8 assumptions grounded in the facts and circumstances of this case. *See* ECF 494 at 88;
9 *see also Kewazinga Corp. v. Google LLC*, 2024 WL 4894840, *4-5 (S.D.N.Y. Oct.
10 17, 2024) (finding methodology unreliable where expert made assumption
11 “contradicted by the record” and computation was not based on “sufficient facts or
12 data”); *Brighton Collectibles, Inc. v. RK Texas Leather Mfg.*, 923 F. Supp. 2d 1245,
13 1254-55 (S.D. Cal. 2013) (excluding expert who did not “ground[] his assumption
14 with the real world facts of [the] case” and noting that “the Court has a duty to ensure
15 that [the expert’s] methodology is sound and that his testimony is supported by the
16 underlying facts”).² East did not do so, so her opinions must be excluded.

17 Indeed, the Opposition highlights East’s key assumption that lacks empirical
18 foundation: that what is true for the “typical California UI recipient,” the “majority
19 of UI recipients,” or the “median UI recipient” *before the pandemic* is also true for
20 most (but not all) of the class during the pandemic. *See* Opp. 3-4. But class members
21 received benefits under pandemic-related programs that did not exist before the
22 pandemic. *See* Mot. 10-11. Through those new programs, many class members were
23 able to qualify for pandemic assistance with financial and employment histories that
24 did not qualify them for pre-pandemic UI benefits. *See id.* Additionally, some further

25
26 ² Plaintiffs’ attempt to distinguish *Brighton* (Opp. 11) is unavailing. This Court
27 rejected a proposed damages methodology in *Brighton* after finding the “expert had
28 not grounded his assumption with the real world facts of the case,” or presented “data
to demonstrate” that his assumption regarding the relationship between sales of the
plaintiff’s and defendants’ products was “supported by the underlying facts.” 923 F.
Supp. 2d at 1255. Similar deficiencies are present here.

1 benefited from other financial relief (stimulus payments, repayment freezes and
2 forbearance) unavailable pre-pandemic. *See id.*

3 Plaintiffs try to downplay the significance of these differences by arguing “the
4 financial circumstances of the median UI benefit recipient remained precarious” in
5 spite of them. Opp. 8. Even if that were true, and East reviewed no actual evidence
6 to confirm and has no idea if it was, evidence about a purported “median” class
7 member cannot satisfy Plaintiffs’ *Comcast* burden to prove “actual damages”
8 classwide. *See* ECF 494 at 87-88; *see also In re Flash Memory Antitrust Litig.*, 2010
9 WL 2332081, *11-13 (N.D. Cal. June 9, 2010) (finding regression model unreliable
10 where expert relied on averages and “ma[de] no attempt to assess whether” key
11 damages input varied across class). Beyond this, the testimony Plaintiffs cite in
12 ostensible support of their argument does *not* address “the financial circumstances of
13 the median UI benefit recipient.” *See* Opp. 8. Instead, it reflects East’s
14 acknowledgment that COVID stimulus payments and programs increased UI
15 recipients’ liquidity, and that unnamed sources she referred to in the abstract
16 “suggest[ed]” that none of these payments or programs was independently sufficient
17 to “get them out of their difficult financial situation.” *See* HX 33 76:2-80:22. But
18 when asked about the cumulative effect of “expanded UI and stimulus payments,”
19 East conceded that certain UI households received replacement rates of over 300
20 percent. HX 52 86:7-12. Thus, East’s analysis necessarily relies on the assumption
21 that UI households receiving significant income replacement during the pandemic
22 would have adopted identical income-replacement strategies as households faced
23 with a loss of UI benefits before the pandemic with *no* income replacement.

24 The class certification order and the case law require East to rely on actual
25 facts or data supporting the notion that this assumption is grounded in fact for the
26 class members, but she offers none. *See* ECF 494 at 88; *see also Kewazinga*, 2024
27 WL 4894840, *4; *Brighton Collectibles*, 923 F. Supp. 2d at 1254-55. Plaintiffs
28 attempt to handwave this away by repeatedly characterizing BANA’s arguments as

1 going to the weight of East’s opinions, not their admissibility. *See* Opp. 1, 9, 13, 14.
2 But the Court has already held they do not. *See* ECF 494 at 87-88. And Plaintiffs
3 identify *no* authority for the proposition that the possibility of cross-examination can
4 cure the methodological defects of a damages analysis that is wholly unmoored from
5 the record. *See, e.g., Schulze v. United States*, 2019 WL 1440306, *3 n.3 (N.D. Okla.
6 Apr. 1, 2019) (“Cross-examination cannot cure an expert’s failure to apply a reliable
7 methodology and does not satisfy this court’s gatekeeping function.”); *Orthoflex, Inc.*
8 *v. ThermoTek, Inc.*, 986 F. Supp. 2d 776, 798-99 (N.D. Tex. 2013) (“the opportunity
9 for cross-examination is not of itself sufficient to cure expert testimony that is
10 unreliable under *Daubert*”).

11 Plaintiffs’ reliance on *Van v. LLR, Inc.*, 962 F.3d 1160, 1164-65 (9th Cir. 2020)
12 (Opp. 10-11), furnishes no support for Plaintiffs’ argument that East is entitled to
13 base a damages calculation on credit-card costs with no evidence about any class
14 member’s use of credit cards. Plaintiffs cite *Van* to claim that interest rates are a
15 permissible way to measure the time value of money and that “*any* interest rate . . .
16 necessarily reflects a generalization about the time value of money that is not strictly
17 tied to the specific economic circumstances of the individual” who pays it. Opp. 10.
18 But what *Van* does *not* support, and what East fails to demonstrate by any reliable
19 method, is that the lost access to funds *at issue here* can be appropriately measured
20 using the 20.8% credit card interest rate without any evidence that the class members
21 borrowed funds at all, or borrowed funds at or near that rate. *See* Mot. 14. Without
22 such a showing, East’s generalizations and statistics regarding UI recipients broadly
23 across time and geography do not reliably demonstrate that a credit card interest rate
24 is an appropriate measure of the lost time value of money *for the class members*.

25 Plaintiffs also rely on *Van* to suggest that they need not show any evidentiary
26 connection between East’s proposed credit-card interest rate and any class member
27 utilization of credit cards because the interest rate is “simply a way of measuring . . .
28 injury, not the injury itself.” Opp. 10-11. But nothing in *Van* supports the notion that

1 damages for the “lost time value of money” can be measured by the cost of borrowing
2 on credit cards. Indeed, the *Van* court explicitly stated that it did not consider and
3 made no determination as to whether the plaintiff made a sufficient evidentiary
4 showing to prove damages. 962 F.3d at 1165 & n.3. Further, the Court has already
5 held that damages based on the cost of borrowing on credit cards are not available
6 absent evidence that assumptions about credit card utilization can be shown to be
7 true. *See* ECF 494 at 88.³ Merely proffering interest rates as “simply a way of
8 measuring injury” does not establish that this “way of measuring injury” is accurate,
9 reliable, or based on any evidence at all.

10 Had East even tried to sanity check her opinions by consulting the factual
11 record—which she freely admits she did not (HX 33 at 141:25-142:24)—she would
12 have had to reconcile her indiscriminate application of a 20.8% interest rate with
13 evidence establishing that [REDACTED]

14 [REDACTED]
15 [REDACTED]. *See* Mot. 11-12.

16 And, as the Opposition concedes, some of the class members were “able to borrow
17 from friends and family at a *zero* percent rate.” Opp. 10 (original emphasis); *see also*
18 Mot. 11-12. East also would have had to grapple with the reasonableness of her
19 assumption that turning to credit-card borrowing reflected the actual experience of
20 class members who lost access to benefits of [REDACTED] or [REDACTED]

21 [REDACTED] *See* Mot. 11. East’s failure to conduct any testing against the
22 available record evidence to support her use of the 20.8% interest rate is fatal because
23 where “an expert opinion is not supported by sufficient facts to validate it in the eyes
24 of the law, or when indisputable record facts contradict or otherwise render the
25

26 ³ Plaintiffs’ claim that BANA’s position “fairly stated” is that “*no* classwide interest
27 rate could *ever* be supported by a factual basis due to variations in class members”
28 (Opp. at 11 (original emphases)) is hyperbolic and untrue. Again, BANA’s position,
consistent with the Court’s class certification ruling and the case law (*see generally*
Mot. 8-13), is that an arbitrarily chosen interest rate that lacks an evidentiary
connection to the class members’ actual experience is improper.

1 opinion unreasonable, it cannot support a jury's verdict.” *Brooke Grp. Ltd. v. Brown*
2 & *Williamson Tobacco Corp.*, 509 U.S. 209, 242 (1993).

3 Plaintiffs attempt to gloss over East’s failure to consider the factual record by
4 claiming that it is customary for economists to consider the “average experience” and
5 disregard outliers. Opp. 3, 9. But East has no basis to classify any class members’
6 experiences as outliers or “extreme values”—especially when the experiences she
7 considers outliers or “extreme” are the experiences of *the class representatives*
8 *themselves*, who are supposed to be *typical* of the class, not outliers. Opp. 9. And,
9 while it may be “customary” to measure harms using average experiences in the field
10 of economics, that says nothing about whether the measure is *reliable* or its “fit” to
11 the case, since “scientific validity for one purpose is not necessarily scientific validity
12 for other, unrelated purposes.” *Daubert v. Merrell Dow Pharms., Inc.*, 509 U.S. 579,
13 591 (1993).

14 Moreover, even if a competent economist proffers a reliable measure of harm
15 based on average experiences, that does not mean the measure suffices as a matter of
16 law to carry Plaintiffs’ *Comcast* burden, which requires a methodology that is valid
17 classwide, not just valid on average. *See In re Flash Memory*, 2010 WL 2332081,
18 *11-13 (regression model unreliable where expert relied on “average price trend” and
19 “ma[de] no attempt to assess whether” key input varied across class); *accord* ECF
20 494 at 87-88. Where, as here, the harms suffered (if at all) by individual class
21 members vary and there is no attempt even to try to account for those variations,
22 aggregate damages calculations are unreliable. *See, e.g., In re Flash Memory*, 2010
23 WL 2332081, *10; *Utne v. Home Depot USA, Inc.*, 2022 WL 16857061, *5, *7 (N.D.
24 Cal. Nov. 10, 2022) (striking “aggregate” damage calculations because “neither
25 model here purports to derive a total award from a sum of individual class members’
26 awards” and “[w]ere the jury to return an aggregate award, it would ‘not be possible
27 to know which [class members] are entitled to share in the award,’ or how much each
28 should receive”); *In re Apple iPhone Antitrust Litig.*, 2022 WL 1284104, *16 (N.D.

1 Cal. Mar. 29, 2022) (“plaintiffs may rely on aggregate damage estimates, but must
2 also establish that there is a method, common across the class, for arriving at
3 individual damages”) (internal quotations omitted); *Medlock v. Taco Bell Corp.*,
4 2015 WL 10791410, *6 (E.D. Cal. Dec. 11, 2015) (rejecting damages methodology
5 based on “aggregate [] figures . . . instead of the actual rates” applicable to the class
6 members).⁴

7 To the extent the Opposition argues that “[c]ourts do not exclude expert
8 testimony because it is conservative,” Opp. 12, Plaintiffs miss the point. Courts
9 routinely exclude expert conclusions when their “conservative” nature is just a cover
10 for their unreliability. *See* Mot. 8-9; *Sentius Int’l, LLC v. Microsoft Corp.*, 2015 WL
11 451950, *5 (N.D. Cal. Jan. 27, 2015) (“[a] damages theory that stems from an
12 erroneous methodology is not admissible even if it results in a low ultimate damages
13 figure”). This is not a situation where East devised a method for measuring damages,
14 then settled on a figure at the low end of an estimated range for the sake of being
15 conservative. Rather, East devised no method for measuring actual damages *at all*,
16 and therefore measured something else. Mot. 11-13; *supra* at 4-7. She calls it
17 “conservative” only because she claims that whatever the actual measure of damages
18 is, it is likely higher than what she estimated. *See* Mot. 8-10; *supra* at 3-4. This wholly
19 unsupported assumption is “connected to existing data only by the *ipse dixit* of the
20 expert.” *Gen. Elec. Co. v. Joiner*, 522 U.S. 136, 146 (1997). A damages expert is
21 supposed to analyze the class’s damages—not analyze something else that has *no*
22 demonstrated connection to the class’s damages, and ask the Court to accept her *ipse*
23 *dixit* that whatever the class’s damages are, they are probably higher.⁵

24 ⁴ *Accord*, e.g., *Reed v. Advocate Health Care*, 268 F.R.D. 573, 590-91 (N.D. Ill.
25 2009) (collecting cases rejecting “reliance on averages” to estimate classwide
26 damages without evidence that “all members of the proposed class suffered” the same
27 harms); *In re Processed Egg Prods. Antitrust Litig.*, 312 F.R.D. 124, 159 (E.D. Pa.
28 2015) (“The case law understandably allows for averages and aggregations, but only
if the court is convinced that the averages and aggregations are not masking
individualized issues”).

⁵ The Opposition either unintentionally misconstrues or deliberately misstates
BANA’s challenge to East’s analysis by citing cases for the proposition that it is

1 Plaintiffs’ argument (Opp. 14) that aggregate damages may be calculated on a
2 classwide basis based on an interest rate “if the evidence shows that number is a
3 reasonable and defensible proxy for the class members’ aggregate loss” confirms that
4 exclusion is warranted here, because there is no such evidence. Indeed, there is no
5 asserted nexus whatsoever between any losses actually suffered by the members of
6 the class and East’s “proxy,” and therefore they must be excluded. *See* Mot. 10-12.

7 None of the cases Plaintiffs cite in contending that “aggregate classwide
8 damages liability may be calculated based on a single number, such as an interest
9 rate” support the proposition that *any* arbitrarily chosen number or rate will do. *See*
10 Opp. 14-15.⁶ Plaintiffs point specifically to *Briseno v. ConAgra Foods, Inc.*, 844 F.3d
11 1121 (9th Cir. 2017), but the only issue presented there was “whether, to obtain class
12 certification under Federal Rule of Civil Procedure 23, class representatives must
13 demonstrate that there is an ‘administratively feasible’ means of identifying absent
14 class members.” *Id.* at 1123. That has nothing to do with the use of “generalizations”

15 _____
16 permissible to base a damages methodology on approximations. Opp. 15-16 n.5.
17 Nothing in BANA’s Motion claimed otherwise. The focus of BANA’s challenge was
18 and remains that the assumption that East’s 20.8% interest rate is not a *reliable and*
19 *supported* approximation of anything. *See* Mot. 11-12; ECF 494 at 87-88.

20 ⁶ In *Olean Wholesale Grocery Coop., Inc. v. Bumble Bee Foods LLC*, 31 F.4th 651
21 (9th Cir. 2022), while the court permitted a regression analysis offered to show
22 potential classwide *liability*, it explicitly stated that “individualized differences . . .
23 may require a court to determine *damages* on an individualized basis.” *Id.* at 679.
24 Further, the court found that the price correlation test in *Olean*, which was offered to
25 assess price-fixing impact but not damages, was subject to rigorous testing to assess
26 its applicability to the facts and circumstances of the case. *See id.* at 670-72. East
27 conducted no such testing here. *See supra* at 6; Mot. 11-13. In *Belyea v. GreenSky,*
28 *Inc.*, 2025 WL 589037 (N.D. Cal. Feb. 24, 2025), the expert purported to estimate
what class members would have paid if they had not been charged a fee they had all
been charged, rather than purported cost-of-borrowing costs that were incurred as a
result of money purportedly withheld. *Compare id.* *5, with Mot. 9. Further, the
analysis was permitted, in part, because it relied on defendant’s *actual* loan
origination data for the class and because the expert reviewed and confirmed the
analysis was consistent with the defendant’s communications and training manual.
Belyea, 2025 WL 589037, *5. Similarly, in *Fitzhenry-Russell v. Dr. Pepper Snapple*
Grp., Inc., 326 F.R.D. 592, 601 (N.D. Cal. 2018), the expert merely was asked to
assess the difference between the price class members paid and the price that may
have been charged in their market but for the false claim. The case says nothing about
whether class members’ purported costs of borrowing can be aggregated classwide.
See id.

1 in measuring damages on any basis, which is the issue here. Plaintiffs’ reliance on
2 *Hartley v. Dillard’s, Inc.*, 310 F.3d 1054 (8th Cir. 2002), to support their claim that
3 East need not account for “damages suffered by . . . individual class member[s]”
4 (Opp. 12) leaves one wondering whether Plaintiffs even read the case. *Hartley* was
5 an individual employment case, not a class action, and says nothing about when
6 damages might be measured in an aggregate or “general” fashion. *Id.* at 1058-60.⁷

7 The Ninth Circuit has “interpreted *Comcast* to mean that plaintiffs must be
8 able to show that their damages stemmed from the defendant’s actions that created
9 the legal liability.” *Vaquero v. Ashley Furniture Indus., Inc.*, 824 F.3d 1150, 1154
10 (9th Cir. 2016) (internal quotation marks and citation omitted); *accord Comcast*
11 *Corp. v. Behrend*, 569 U.S. 27, 35 (2013) (“a model purporting to serve as evidence
12 of damages in [a] class action must measure only those damages attributable to th[e]
13 theory” of liability). Plaintiffs’ liability case seeks compensation for “the loss of use
14 of money” (ECF 494 at 86), and East proposes to measure damages for that alleged
15 lost use of money by credit-card interest rates. But East does not, and cannot, claim
16 that payment of credit-card interest occurred at all for the class members, much less
17 that it is something that “stemmed from the defendant’s actions.” *Vaquero*, 824 F.3d
18 at 1154. There is thus a fatal mismatch between the theory of liability and the
19 damages model East offers. Her opinions should be stricken as unreliable and
20 irrelevant.

21 CONCLUSION

22 For these reasons and the reasons set forth in BANA’s Motion and evident
23 from the record, East’s report and opinions should be stricken and excluded.

24 ⁷ Plaintiffs’ attempt to distinguish *In re Blackbaud, Inc. Cust. Data Breach Litig.*,
25 2024 WL 2155221 (D.S.C. May 14, 2024), where the court excluded an expert who
26 tested his methodology on the “three named plaintiffs” and failed to indicate whether
27 or how he verified the accuracy . . . for those three individuals” (Opp. 16) falls flat.
28 In *Blackbaud*, the court excluded an expert because it found the expert’s proposed
method was “unreliable and unhelpful” because several aspects of the method “were
not properly tested” and the expert “extrapolated from numerous accepted premises
to unfounded conclusions,” which is precisely what East does here. 2024 WL
2155221, *14.
