## KELLER'S 5-MINUTE WORKPLACE SAFETY TALKS

### Lifting Techniques

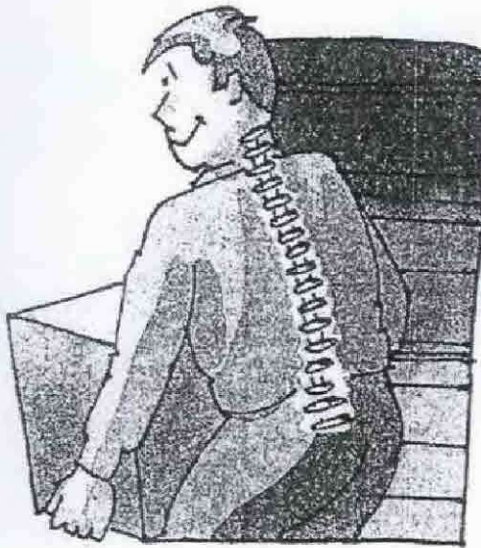

#### Overview

Sprains and strains to the muscles, tendons, ligaments, and disks of the back may be the most commonly reported workplace injury. Most of these back problems are preventable through the use of proper lifting technique.

#### Back problems

Back problems can include:

- strains and sprains.
- torn ligaments.

- ruptured or slipped disks.
- muscle spasms.

#### Rules of good lifting

- Size up the load before lifting—test by moving a corner or pushing the load.
  - Bend the knees when lifting—let your legs do the work.
  - Place feet close to the object and center yourself over the load.
  - Lift straight up in a smooth motion.
  - Do not twist or turn your body during the lift.
- Make sure there is a clear path—don't fall over something you can't see.
  - Set the load down properly.
  - If it is a long object, get some help.
  - Split the load into smaller loads if possible.

#### Other factors

Back injuries can also occur off the job. Hobbies and leisure activities can prove to be a source of back problems. Keep yourself in good physical shape and monitor your activities off the job as well.

### LIFTING TECHNIQUES HANDOUT#1

Handouts may be copied and distributed to workers for use during your training session. Please refer to HOW TO USE THIS MANUAL for restrictions.

## *The Forklift Workshop*

### Quiz Answer Key

Directions: Read each statement carefully and circle the response that best answers the question. Correct answers are in bold.

1. The stability triangle is used to describe:
  - A. A slow moving vehicle sign
  - B. The proper way for mounting or dismounting a forklift
  - C. A procedure of making a three-point turn with rear steering
  - D. The imaginary line that runs along the forklift's three-point suspension system
2. A forklift is less stable with a raised load because:
  - A. The combined center of gravity shifts when the load is raised
  - B. The front tires come off the ground
  - C. The rear wheels are slightly elevated
  - D. None of the above
3. Forklifts must be inspected for defects:
  - A. By a licensed and authorized mechanic
  - B. Post-accident only
  - C. At least daily before being placed in service
  - D. Once per week
4. When you pick up a load:
  - A. Place the forks under it as far as possible
  - B. Make sure that it's within the forklift's capacity
  - C. Tilt the forks back slightly to stabilize it before you move
  - D. All of the above
5. You should drive in reverse with the load trailing when:
  - A. The load is being transported up a ramp, incline or grade
  - B. The load blocks your line of sight
  - C. The floor surface is wet, oily or icy
  - D. The load is unstable

6. True or False? When traveling up a ramp without a load, the unit's forks should point upgrade.
  - A. True
  - B. False
7. If you're driving behind a very slow forklift:
  - A. Pass it at the next intersection
  - B. Sound your horn to signal to the other operator to go faster or pull over
  - C. Stay about three truck lengths behind it
  - D. Drive within one truck length until the other operator gets the hint
8. If you dismount the forklift and walk around the corner so that the forklift is no longer within your view, you should:
  - A. Lower the forks and set the parking brake
  - B. Lower the forks, put the controls in neutral and set the parking brake
  - C. Lower the forks, put the controls in neutral, shut off the power and chock the wheels
  - D. Lower the forks, put the controls in neutral, set the parking brake and shut off the power
9. True or False? Carbon monoxide is a concern only when loading trucks, trailers or rail-cars.
  - A. True
  - B. False
10. When charging a battery on a forklift, start by:
  - A. Putting on proper personal protective equipment
  - B. Making sure no metal objects contact the battery terminals
  - C. Uncovering the battery compartment
  - D. Turning off the battery charger before connecting it to the battery

## Hazmat Security Awareness Quiz

Name Leah Garcia  
Instructor Cameron  
Company/Division National  
Date 11/6/10

1. All hazmat employees must receive security awareness training.

- ☒ a. True  
b. False

2. Security awareness training must provide:

- a. An awareness of security risks associated with hazmat transportation  
b. How to recognize and respond to possible security threats  
c. Methods designed to enhance transportation security  
☒ d. All of the above

3. All companies must complete a security plan.

- a. True  
☒ b. False

4. Gasoline and other flammable materials can be viewed as a potential threat.

- a. True  
b. False

5. Only drivers have to be concerned with potential threats and potential targets.

- a. True  
b. False

6. Why is a vulnerability assessment important?

- a. It tells you how strong you are  
☒ b. It helps determine potential targets and security threats  
c. It determines whether you need to conduct security awareness training  
d. None of the above

7. What should you do when you observe suspicious behavior?

- a. Ask the person if something is wrong  
b. Watch to see if anything more serious occurs  
c. Report it immediately  
☒ d. All of the above

8. It is not important to be able to identify potential security risks unless you are at work.

- a. True  
☒ b. False

9. Which of the following could best be described as suspicious behavior?

- a. A fight outside a truck stop  
b. A crowd of demonstrators  
☒ c. Someone who asks inappropriate questions about your job responsibilities  
d. None of the above

10. Why is it important to have a heightened sense of awareness?

- a. It isn't always easy to identify a terrorist  
b. Increased security is needed in the world today  
c. You can never be too careful  
☒ d. All of the above

340 N GRANT AVE  
CORONA, CA 92882

**2 Consecutive Satisfactory Ratings**

Since FEBRUARY 11, 2011

There is established in the California Vehicle Code a biennial motor carrier safety compliance inspection program to be conducted by the California Highway Patrol.

That program, known as the Biennial Inspection of Terminals (BIT) Program, requires all motor carriers operating trucks from terminals located in California to undergo an inspection of each operational terminal to rate their compliance with applicable laws and regulations relating to motor carrier safety.

This is to certify that this terminal has achieved consecutive satisfactory safety compliance ratings as indicated above. The California Highway Patrol congratulates this terminal on this meritorious achievement and recognizes the commitment to highway safety demonstrated by the personnel responsible for the operation of this terminal.
